PREFACE

This is the first of seven interrelated volumes comprising Contemporary Cambodian. The other six will be Introductory Lessons, four topic-oriented textbooks, and a comprehensive Cambodian-English English-Cambodian glossary. It is appropriate that this volume bearing the subtitle Grammatical Sketch should be the first module to appear since all the others are to be cross-referenced to it.

Contemporary Cambodian, of which the Grammatical Sketch is a central part, is not projected as a series. The topic-oriented modules are to be co-equal elements in an array of materials from which the course director can choose according to the interests of his students.

Earl W. Stevick, in Adapting and Writing Language Lessons (Superintendent of Documents, Washington, D.C. 1971), says, "The modular principle suggests that the several components be designed so that they may be rearranged to suit the convictions of various kinds of user, and so that the individual components may be replaced with minimum disturbance to the rest." He cites earlier examples of the modular approach in the work of language textbook writers at the Foreign Service Institute and elsewhere. In the plan for Contemporary Cambodian, Miss Ehrman adopts the modular principle and applies it at the intermediate level.

The Grammatical Sketch is essentially a companion-piece to the other volumes. However, language scholars may also find it useful in its own right as a brief description of the Cambodian language.

The seven modules of Contemporary Cambodian, projected, in preparation, or completed, have been made possible by support from the Defense Language Institute and by the cooperation and encouragement of Dr. Roy F. Fallis, Jr., Chief of the DLI Systems Development Agency, and Colonel Roy M. Kessler, Director of the Defense Language Institute.

James R. Frith, Dean School of Language Studies Foreign Service Institute

Foreword

I. Introduction and Recommendations for Use

Contemporary Cambodian, a set of materials in modular form, is meant to teach the Cambodian language to beginning and intermediate students. It includes:

- 1) a basic module of sixty lessons
- 2) four intermediate modules of approximately fifteen lessons each, dealing with political, economic, social, cultural, and military topics (under preparation)
- 3) the present volume; a description of aspects of Cambodian grammar and usage.
 This volume does not include lessons; it is meant to be used for reference.
- 4) a Cambodian-English, English-Cambodian glossary (under preparation)

This part of <u>Contemporary Cambodian</u> is a description of the most important structural and stylistic features of the language. The first chapter is a brief introduction to the language and its speakers. The second chapter is a sketch of Cambodian phonology, that is, the sounds of the language. The following chapter outlines Cambodian syntax, the way words are put together into phrases, clauses and sentences. After the syntax chapter, the word classes nominals, verbals, adverbials, and relators are treated, each class in a separate chapter. The last chapter discusses special problems of vocabulary and usage, focusing on the effects of factors of relative age, social class, and blood relationship. There are two appendices, as well. The first summarizes the many uses of some very common words that are grammatically significant. The second appendix describes Cambodian naming patterns and presents the most common titles.

There are many points of grammar and usage that are not treated in this sketch. Some of these occur in the notes to the lessons, which are also part of Contemporary Cambodian. There are other points which are simply not treated in these materials at all. However, I hope that what has been included will meet the needs of beginning and intermediate students of Cambodian.

It is recommended that beginning students read the Introduction (Chapter I) and simply look quickly throught the rest of the grammatical sketch to give themselves an idea of its contents. Students should read carefully any sections of the sketch which are cross-referred to in the lesson they are currently studying; it would also be helpful

to look at sections surrounding the section referred to. After approximately twentyfour weeks of study it is recommended that the student read through the sketch to
familiarize himself more thoroughly with its contents. The beginning and intermediate
modules in this course are meant to be used with this grammatical sketch, since many
very important points are not discussed in the notes to the lessons but simply given a
cross-reference to the sketch.

II. Acknowledgements

I am grateful for the help of many people, without which this grammatical sketch would not have been possible. Responsibility for error is mine, of course, but whatever merit this volume may have is in large part due to the following:

to Dr. James Frith, Dean of the FSI School of Language Studies, for his interest, his encouragement, and his support throughout all phases of this project, from preparation of the proposal to final typing for publication. I owe my very fruitful six weeks in Phnom Penh more to Dr. Frith than to any other person. I especially appreciate Dr. Frith's patience with my impatience during periods of slow progress.

to Dr. Roy Fallis of the Defense Language Institute, for his interest and support, and for his large contribution to making a reality of the Cambodian materials project of which this grammatical sketch is a part.

to Dr. Warren Yates, Chairman of the Department of East Asian Languages at FSI and Mr. Augustus Koski, Publications Chief at FSI, for administrative support, including good-natured toleration of my impatience.

to Mr. Nuon Bouth of Phnom Penh, Mr. Dik Keam of the Buddhist Institute in Phnom Penh, Mrs. Marianne Adams of FSI, Dr. Warren Yates of FSI, and Dr. Franklin Huffman of Yale University for reading through the prefinal draft of the sketch and giving helpful suggestions. Dr. Huffman's comments were especially detailed, and all were useful. Dr. Huffman's dissertation <u>Outline of Cambodian Structure</u> (1967) has been of great help to me also; specific debts to this book are acknowledged in footnotes in the body of the grammatical sketch.

to Dr. Allen Weinstein of the Vietnam Training Center at FSI, from whom I learned a great deal about Vietnamese in our many very helpful discussions when I was working with him as linguist for Vietnamese. Many of Dr. Weinstein's ideas about Vietnamese structure have influenced my analysis of Cambodian, since the two languages have many grammatical points in common.

to the many colleagues at FSI whose ideas influenced the format of these materials. The modular arrangement of the materials is the product of the thinking of many people here, chief among whom have been Dr. Ronald Goodison and Dr. Earl Stevick. Dr. Stevick was also of help in choosing the title Contemporary Cambodian.

to Mr. Kem Sos, who taught me much of the Cambodian I know. Mr. Kem Sos is an outstanding teacher, an excellent linguistic informant, and a gifted creator of materials. The high quality of his calligraphy is evident throughout this volume. In addition to his contributions as teacher, informant, author, and scribe, Mr. Kem Sos has been my most careful and thorough critics he read every chapter as it was written and caught many errors both of commission and of omission.

to Mr. Walter Rhinehart, Jr. and Mr. Kenneth Landon, Jr., for a careful job of typing.

Madeline E. Ehrman

CONTEMPORARY CAMBODIAN: GRAMMATICAL SKETCH

I.1 Introduction

The official language of Cambodia is Cambodian, also known as Khmer. It is the native language of the approximately 7,000,000 Khmer who constitute a majority in Cambodia. Cambodian is spoken also by approximately 4,500,000 Cambodians in the Mekong Delta area of South Vietnam and approximately 700,000 in northeastern Thailand.

Other languages spoken in Cambodia include Vietnamese, Chinese, Cham, various Montagnard tongues in the northeastern region, and Thai near the Thailand border.

I.2 Geographic and Social Divisions of Cambodia

Cambodian geographic dialects differ little from one anot. Social divisions, however, involve highly formalized conventions affecting the most common types of speech.

I.2.1 Geographic Divisions

The best known division in the Cambodian speech community is between Cambodia proper (including Cambodians in Thailand) and Cambodians living in South Vietnam, who are known as the Khmer Krom 'lower Cambodians.' The dialects are mutually intelligible, since the differences are primarily phonological and are slight. Khmer living in Thailand have a divergent dialect as well.

Within Cambodia, Phnom Penh speech differs slightly from the provincial varieties of the language. The major feature distinguishing Phnom Penh speech is that where other dialects have either a flap or retroflex /r/, Phnom Penh has pharyngeal friction accompanied by a low pitch on the following vowel, plus changes in vowel quality in some cases.

The speech of the Khmer Krom is characterized by conservatism in pronunciation.

It corresponds more closely to written Cambodian than does the Cambodian used in Cambodia.

I.2.2 Social Divisions

Members of all social classes use Cambodian for most everyday purposes. Commercial life before the 1970 disposition of Sihanouk was controlled largely by the Chinese (big business) and the Vietnamese (small business), and this fact was reflected in the widespread use of Chinese in major business transactions and of Vietnamese in small ones.

^{1.} Franklin Huffman, personal communication.

Vietnamese was used for bargaining. Since spring 1970 many of the Vietnamese have left Cambodia and consequently they no longer control small business.

Most Khmers are peasants engaged in rice growing. The civil service is largely Khmer, but is relatively small. The other two important social classes among the Khmer are royalty and the Buddhist clergy.

Royalty and Buddhist monks each use a variety of Cambodian which is characterized by obligatory substitutions of vocabulary items, most notably personal pronouns and words referring to common activities like eating and walking. Members of these two groups must be addressed and described in language using these characteristic terms as well.

I.3 The Cambodian Language

The Cambodian language is the most important member of the Mon-Khmer language family. Mon-Khmer is probably related to Vietnamese; attempts have also been made to relate Mon-Khmer and the Malayo-Polynesian language family, but so far no scholar has succeeded in providing completely convincing evidence for this hypothesis. Thus, for the time being, Cambodian and its Mon-Khmer relatives are treated as unrelated to any other languages. However, Cambodian has borrowed from many languages, especially from Sanskrit, Pali, Thai, and Vietnamese. It has also borrowed from Chinese, Portuguese, Malay, more recently French, and still more recently from English.

Most colloquial speech relies on native Mon-Khmer words; however, any elevation in style or discussion of topics of a political, cultural etc. nature involves the introduction of many words of Indian (Sanskrit and Pali) origin. Sanskrit and Pali bear much the same relation to Cambodian as Greek and Latin do to English. Most neologisms are coined using Indic roots, and puristic speakers prefer a neologism of Indic origin to a French or English borrowing. Nevertheless, the ordinary speech of urban Cambodians contains many French words, especially for products of Western technology and philosophy, since most secular education has been in French (but the amount of French used in the schools is currently decreasing in favor of Cambodian and, to some extent, English).

The majority of rural Cambodians are monolingual in Cambodian. However, the populations of areas bordering Thailand, Laos, and Vietnam are bilingual in varying degrees of fluency; Cambodian males who have studied at a Buddhist pagoda are familiar with Pali and Sanskrit, and some urban Cambodians know Chinese. Of course, educated Cambodians know French.

Cambodian may be typed as an isolating language, which means that it makes most of its

grammatical distinctions by means of word-order rather than by means of affixes and changes within words. Native Khmer words may include prefixes, suffixes, and infixes which change the part of speech (e.g. by turning a noun into a verb) or which change the root meaning of a word without changing its grammatical function. However, while the patterns of affixation are complex, the affixes are seldom used in new combinations and so are more helpful in recognizing relations between words than in the creation of new words.

Cambodian is unlike its neighbors in that it is nontonal. Most words of native origin are mono- or disyllabic; words of Indic origin tend to be polysyllabic. Cambodian words have stress on the last syllable, even in polysyllables borrowed from Sanskrit, Pali, and modern European languages.

PHONOLOGY

P.1 Consonants

Cambodian has 22 consonant phonemes (sets of sounds that distinguish between one word and another in a given language, e.g. English bet and pet, in which /b/ and /p/ are distinct phonemes). They are:

		labial	dental	palatal	velar	glottal
Stops	voiceless, unaspirated	p	t	c	k	7
	voiceless, aspirated	ph	th	ch	kh	
	voiced, (implosive)	ь	đ			
Nasals		m	n	ñ	ŋ	
Fricati	ves	(f) ¹	3			h
Flap			r			
Lateral			1			
Semivow	rels	w	y			

Of these, only the following are likely to give much trouble to the English speaker.

P.1.1 Single Consonants

- a.) $/\tilde{n}/$ is very similar to the <u>ny</u> sound in <u>canyon</u> or <u>onion</u> when pronounced fast. It is pronounced with the front third of the tongue starting from a position against the hard palate: $\tilde{m} \approx /\tilde{n} \cos / \tilde{n} \cos$
- b.) English speakers use /n/ all the time at the end of a syllable, e.g. song, singing. However, some Cambodian syllables begin with this sound, e.g. syllables or some /nen±t/ 'dark.' If you are having trouble making this sound, try the following exercises:
 - 1. Say <u>singing</u>, but draw out the <u>ng</u>, so that you are saying 'sinnnggging.'
 Then try to break the word after the first <u>i</u>: si-nngging, si-nging, then leave off the <u>si</u> and say 'ning.'

^{1.} Occurs only in words borrowed from other languages, e.g. /kafee/'coffee!

- 2. Put your tongue into position to say ga, but don't actually say it.

 Now instead of letting the air out through your mouth as you would when you say ga, let it out through your nose (as you would if you were saying ma or na). You should end up saying na. (Remember, as you say na to keep your tongue in the position for saying ga.)
- c.) English speakers use both aspirated and unaspirated stops all the time, but they do not pay attention to them because they do not make distinctions between words with aspiration. For instance, if you hold a light piece of paper before your lips as you say pin (aspirated p), you will see the paper flap, but if you say spin (unaspirated p), the paper will move much less. In Cambodian, words are distinguished by the difference between an aspirated and unaspirated stop, e.g.

 'month;'

 'to correct' and

 /khae/

 'month;'

 /taa/ 'grandfather' and

 /thaa/ 'to say.' It will be necessary for you to listen for this distinction and be careful to make it when you speak.

Note that the unaspirated voiceless stops /t/ and /p/ may sound like the voiced stops /d/ and /b/. However, they, too, are in contrast, e.g. ** /taɛ/ 'but, only' and ** ** /* ** ** ** /puon/ 'to hide' and ** /* /buon/ 'four.' The voiced stops /b/ and /d/ are articulated with a slight intake of air rather than the release of air to which you are accustomed in English.

- d.) At the end of a syllable, /c/ is pronounced without friction. It may sound at first like a kind of /t/ to you, but in fact it is a ch-sound begun but not finished.
- e.) Unlike the English retroflex r, Cambodian /r/ is a tongue-tip flap made just behind the upper teeth). It is very similar to the Spanish r in pero 'but.' Cambodian example: fest /roby/ 'hundred,' fer' /pram/ 'five.' In Phnom Penh speech, prevocalic /r/ is replaced by pharyngealization and a low rising tone on the following vowel. If your teacher speaks the Phnom Penh variety of Cambodian imitate his pronunciation of the following words: for /pras/ 'translate,' for /kruu/ 'teacher,' for /kruu/ 'study.'
- f.) The Cambodian /v/ varies from speaker to speaker. Some speakers pronounce it like English \underline{v} but others pronounce it like English \underline{v} but with both lips rather than the upper lip and lower teeth as in English.

2. In this table the distinction maintained in the transcription between p,t,k,c and ph,th,kh,ch is not made before another consonant, since in fact structurally there is no distinction between aspirates and nonaspirates in this position. That is, while on this point the usual transcription is really a transliteration, in this table, it is a real transcription.

P-1-2 Consonant Sequences

A Cambodian syllable can begin with a two-consonant sequence () trew/ 'must') or three-consonant sequence (/ strey/ 'woman (formal)'). A few of these will give the English speaker no trouble, since they also occur in English.

There is no contrast between aspirated and unaspirated stops before another consonant.

However, in order to aid in spelling in Cambodian script, the distinction between aspirated and nonaspirated consonants is maintained in the transcription used in these materials.

Thus, for instance, /pkaa/ 'flower' is transcribed phkaa because the Cambodian character represents the voiceless aspirate /ph/ before a vowel. However, it could equally well be transcribed /pkaa/.

P.2 Vowels

There are 30 distinct vowel nuclei occurring in Cambodian syllables. Many are very similar to English vowels; others are very different, and others are deceptively like English sounds at first hearing but prove to demand close attention for accurate imitation.

The Cambodian vowels divide up into the following classes: short vowels, long vowels, short diphthongs, and long diphthongs:

	Short	*selewov			Long vo	owels:	
	front	central	back		front	central	back
high	i	±	u	high	ii	44	uu
				high mid			oo (also written ou)
mid	9	ə	0	mid	98	9 9	бо
low		a	5	low	33	aa	၁၁

	Short dipht	hongs ³ :		Long diphthongs:		
	front	back		front	central	back
high		ъ́	high	iə ⁴	ŧ∙ə	uo
low	ં	8	mid	ei ⁵	ə 1	08
			low		aə,aɛ,ao	

The short central vowels $/\pm/$, /e/, and /a/ combine with /y/ and /w/ to yield $/\pm y$, $\pm w$, ey, ew, ew,

When you listen to Cambodian, you will hear that before syllable-final /c/ or / \tilde{n} / a vowel is followed by a non-contrastive /y/ glide, so that a word like \tilde{n} /touc/'small' is actually pronounced something like [touyc].

P.3 Syllables

Every Cambodian syllable begins with a consonant or consonant cluster, has a nucleus, which consists of a vowel or diphthong, and may or may not end in a consonant. Any consonant may begin a syllable but only the following consonants may end a syllable:

There are no syllable-final consonant clusters. The possible syllable initial clusters are treated in section P.1.2 above and in Table I. Note that many of these combinations do not occur in English.

The consonants \underline{w} or \underline{y} are not followed by another consonant in the same syllable. Short diphthongs occur only in closed syllables (syllables ending in a consonant), e.g. e^{-r} /p6?/ *to wear.*

^{3.} The transcription of the short diphthongs conceals the fact that they are really diphthongs /ee, we, oe/ (the breve indicates that the diphthong is short) rather than short vowels.

^{4.} In the transcription used in these materials, /ie/ is represented by <u>ia</u> (transcribing the script symbol -? after a second series consonant) and by <u>ie</u> (transcribing the symbol *:)). Thus *E? /cie/ is transcribed cia but *?) ** /rien/ is transcribed <u>rien</u>, even though the vowels are the same.

^{5.} In the dialect that this transcription represents there is no distinction between /ei/ and /ee/, so /ei/ does not appear in these materials. However, some Cambodians do have the distinction; if your instructor distinguishes between /ei/ and /ee/, follow his example.

^{6.} The transcription used in these materials writes /w/ as \underline{w} in / \underline{i} w, \underline{w} , \underline{a} w/, \underline{e} s/ /vɛɛn/ 'long.'

P.4 Words

Most native Cambodian words consist of one or two syllables. However, the language has borrowed a great many words from Pali and Sanskrit, with the result that there are now many polysyllables, especially in literary and educated usage. In all cases, however, the main stress falls on the last syllable of the words of the words of the close of the words o

In most compounds (words made up of two or more other words), each component keeps its stress pattern, e.g. \$7757 CSS /phiepyin/ 'moving picture' or \$25555 /wiccia pset/ 'subject of medicine.'

P.5 Phrases

A phrase in Cambodian includes one or more words plus an intonation contour.

The major types of intonation contour are the following:

P.5.1 Rising (Question) Intonation

a) In a confirmation (yes-no) question the intonation contour normally consists of a gradual rise in pitch until the last stressed syllable of the sentence, at which point it continues to rise more sharply over any following unstressed syllables.

kốt cia puo? ma? look rih?

Is he your friend?

b) In an information (question-word) question, the contour rises until the last stressed syllable of the question word, after which it either gradually drops,

រលាកជ្លិបអ្នកណារនៅករិន្តង់ញឹង?

_look cuop ne? naa niw konlaen nin ?

Whom did you meet at that place?

or continues to rise, as in

ton niggy non sain sain's bink?

look cuop ne? naa niw konlas nin?

Whom did you meet at that place?

An information question with falling intonation has a peremptory connotation; rising intonation throughout an information question is more deferent and polite.

P.5.2 Falling Intonation

a) Normal statements are characterized by a slight pitch rise on the most heavilystressed syllable of the clause followed by a drop throughout subsequent syllables.

ระ รณาหญ่วยสีพายลฟหรัฐไข้ผู้ห่ง

tee, look sok thee kaa niw konlasn nin.

No, Mr. Sok works at that place.

b) Emphatic statements are characterized by a sharp drop on the most heavily-stressed syllable and low pitch thereafter.

News sitsovat min meen cia salaa ackecun teh.

The Lycee Sisowath is not a private school.

P.6 Formal and Casual Pronunciation

Like most other languages, Cambodian is spoken differently in formal and casual contexts. In a formal context, the prominciation of each syllable is relatively careful; even unstressed syllables may be pronounced much as they are written. However, the more casual the circumstances, the more reduction is likely to take place in unstressed syllables, especially in the standard and Phnom Penh varieties, so that in some dialects all that may remain of an unstressed syllable is the initial consonant and a reduced vowel /e/, e.g.

> casual /sənat/ 'secret' & & xx formal /sammat/

casual /petech/ 'country'/ press formal /protech/

Internal glottal stop /?/ is normally omitted in casual style, e.g.

casual /niyiey/ 'to speak' formal /ni?yiey/

In addition some consonants change, for example:

casual /lebuoh/ 'wounded' 55,85 formal /robuch/

casual /perien/ 'to teach' #155)& formal /bonrien/

casual /tasee/ 'to write! ASSANS formal /soosee/

casual /kcol/ 'wind, breeze' 3505 formal /kyol/

casual /kcuun/ coal 55 formal /tyuun/

In none of these cases is the change regular; in fact only a relatively small number of words is affected, and they may be learned as they occur.

P.6.1 Unstressed Final Particles

Many of the normally unstressed function words are unstressed in casual speech, e.g.

formal	/min/	casual	/m/	'not'
	/n <u>÷</u> ŋ/		/m, n, n/	'will'
	/t i w/		/tə/	go and
	/móok/		/me/	come and
	/tee/		/eh/	(negative or interrogative final)
	/nah/		/ah/	'very'
	/naa/		/e/	(emphatic)
	/haəy/		/eh/	'already'
	/rii, rii εy/		/±h/7	(interrogative final)
	/n i w/		/ <u>±</u> ₩/	*yet*
	/t i w/		/teh/	(imperative)

The reduced forms of the sentence-final particles /tee, nah, hasy, niw, rii/ break the rule that all syllables begin with at least one consonant (cf. P.3 above), since these reduced forms begin with vowels (/eh, ah, ah, iw, ih/). In combination with a preceding word which ends in a consonant, the following occur:

1. If the consonant preceding the particle is a continuant (m, n, \tilde{n} , η , 1, w, y, h), the continuant is lengthened, e.g.

```
formal /min meen tee/ casual /m meenneh/ 'it's not true'
formal /min trew tee/ casual /m trewweh/ 'it's not correct'
```

- 2. If the consonant is a stop, there are two possibilities:
 - a) the final consonant joins the syllable of the particle, e.g.

 formal /min praket tee/ casual /m pake teh/ 'not sure'
 - b) or the final consonant remains with its original syllable and the particle begins with a nasal consonant which is homorganic to the

^{7. /}rit/ may be dropped altogether, leaving a trace only in the intonation of the sentence, e.g.

formal: look roo? khnom rii?
casual: look roo? khnom? Are you looking for me?

preceding consonant, according to the rules given below in $P_0.6.2$, for example:

formal /min praket tee/ casual /m peket neh/ 'not sure'

formal /s'ep rii/ casual /s'ep min/ 'do you hate (him)?'

c) If the preceding word ends with a vowel, the sentence will end with a sequence of vowels, providing an exception to the rule that a syllable must begin with a consonant, e.g. ?

formal /khñom thvee haey/ casual /khñom theeeh/ 'I've done it already'

d) If there is a sequence of final particles, e.g. romassercy;?

/thom nah hasy rit/ 'Is (he) big already?'

the casual form will end in a sequence of reduced particles, except for /rit/, which is set off by a glottal stops /thommah sh 'th/

In most of the dialogues and drills in the first 60 lessons of the course, the transcription represents a quite casual level of speech. A few words which are not in every day use are transcribed formally, e.g. [15] /prote? kam/ 'reaction.' In a few cases the transcription is more formal, using /tee/ for /eh/ etc.

P.6.2 Nasal Enclitics

In reciting and singing, most Cambodians automatically add a meaningless homorganic nasal enclitic to the last syllable in a phrase or clause if it:

- 1) precedes a pause
- 2) ends in a voiceless consonant (/p, t, c, k, 9 , h/)⁸
- 3) is stressed.

In this case the masal is one of the following:

^{8.} Remember, /s/ does not occur at the end of a syllable.

In Phnom Penh speech this feature appears in casual usage as well. It occurs in a pre-pausal stressed syllable ending in a voiceless consonant, if the sentence has normal statement intonation. In no case does this nasal enclitic affect the meaning of the sentence in which it occurs.

SYNTAX

S.1 <u>Introduction</u>

Like utterances in most other languages, Cambodian utterances can be analyzed into sentences, especially in formal speech. A <u>sentence</u> consists of one or more clauses; a <u>clause</u> consists of one or more phrases, and a <u>phrase</u> consists of one or more words. A <u>word</u> is a meaningful unit that can stand in isolation.

There are several types of clause but only one which can be classed as the major type. This type consists of an optional topic, an optional subject, and an obligatory predicate, plus various adverbials and particles. The topic and subject usually consist of noun phrases; the predicate usually includes a verb phrase, which in turn is frequently followed by a noun phrase serving as object or attribute to the verb.

S.2 Phrases

The two major types of phrase are noun phrases and verb phrases. A noun phrase is one which is headed by a nominal; a verb phrase is headed by a verb. The head of the phrase is the word that the other parts of the phrase modify.

S.2.1 Noun Phrases

The Cambodian noun phrase involves two important constructions: attribution and numeration.

S.2.1.1 Attribution

In nominal attribution the head is followed by the modifier (attribute). The attribute may be:

- l. a verb
 - a. an action verbs \$\hat{B}\$\$\hat{F}\$ /phlew dae/ 'a road for walking'

 (from \$\hat{B}\$ /phlew/ 'road, path' and \$\hat{B}\$\$ f/dae/ 'to walk').
- 2. a noun \$\hat{B}\$ \$\hat{F}\$ /phlew laan/ 'a road for cars' (from \$\hat{B}\$ /phlew/ 'road' and \$\hat{F}\$ /laan/ 'car, automobile').
- 3. an indefinite or question word \$ 5000 /phlew nea/ which road? (from

phlew/ 'road' and Am /naa/ 'which, any').

- 4. a phrase \$\frac{1}{277} \times \text{fery} / phlew dek tumnin/ 'road for transporting goods' (from \$\frac{1}{277} \text{/dek/} 'to transport, lead' and \$\frac{1}{25} \text{cry/tumnin/ 'merchandise').}
- 5. a clause $\mathcal{L}_{\mathcal{S}}(\mathcal{E}\mathcal{L}\mathcal{O})$ from $\mathcal{L}_{\mathcal{S}}(\mathcal{E}\mathcal{L}\mathcal{O})$ the road (that) they are building. Note that a relative clause may or may not be introduced by $\mathcal{L}\mathcal{O}(\mathcal{L}(\mathcal{O}))$ which, that. The version with $\mathcal{L}\mathcal{O}(\mathcal{O})$ is slightly more formal but nevertheless widely used in spoken usage.

Note that possession is expressed either by simple attribution, e.g. 3, /phtsh khñom/ 'my house' (3, /phtsh/ 'house' 2 /khñom/ 'I, me, my') or by a phrase including the word *ESS /reboh/ 'property of, belonging to,' e.g. 3, *FFFS / phtsh reboh khñom/ 'my house' (the house belonging to me).

There are some words indicating quantities which are used before the noun they modify, e.g. North sop through 'every day' (North sop /sop 'every' (hope /through 'day'). These words include:

<i>द्धि</i> छ	/krup/	*all, each, every*
5857	/krup krup/	*all* =
(Acing	/krup sop/	'all'
185	/taε/	only, just
คาล	/t 6 ŋ/	*all of*
คริสรรณ์	/ten oh/	'all of, all'
နောက္မွာ	/piñ/	*all of, to the full extent of*
နာလ'	/r61/	'every' (with time words)
ಹಿಲ್ಲ	/gc s/	'all'
ಮರ್ಥ್ರಗಳ	/sop krup/	'all'
55 BS	/sh/	'all'

^{1.} Parentheses indicate an optional element in Cambodian.

S.2.1.2 Numeration

In English we divide most common nouns into 'count nouns,' which we see as individual items, e.g. books, pencils, shirts, and into 'mass-nouns,' which we see as aggregates that can only be counted by means of measures or as different types, e.g. 'a pound of sugar, three kinds of sugar.' For mass nouns in English we quantify by a construction which consists of a number, a measure, and a noun, e.g. 'three bags of rice' or 'a glass of water.' There are also a few count nouns which can occur in this kind of construction, e.g. 'a pair of shoes.'

The classifier corresponds to the English measure but has a wider distribution. While it is true that some measures occur in classifier position, e.g. AND () sac pii kiilou/'two kilos of meat' AND /sac/'meat' A's /pii/'two' ADS /kiilou/'kilo'), many classifiers are not measures. Nouns are members of semantically determined classes, each of which is characterized by a certain nominal that serves as classifier. Thus, for instance, the classifier ANS /n6' is used with ordinary people; ANS /daem/ is used with sticklike objects like pencils, trees, and rifles; and ANS ANS /kbaal/'head' is used with livestock and books. These classes are not mutually exclusive; for instance one may talk of a train in two ways:

/rotsh phleen muoy krien/ 'one train'
/rotsh phleen muoy khsas/ 'one train'

In the first case attention is focussed on the locomotive, since IFF /krten/ is the classifier normally used for engines and machines. In the second case the train is viewed as a whole, including engine and cars, since IFF /khsas/ refers to strings and wires and long, stringlike objects.

In addition, of course, there are also measures and nouns specifying types that are used in classifier position, e.g. (firecipity) /sraa muoy doop/ 'one bottle of liquor,'

fire /sraa/ 'liquor' get /muoy/ 'one' 25 /doop/ 'bottle') or get get /mehoup bey

muk/ 'three kinds of food' (get /mehoup/ 'food' 25 /bey/ 'three' 29 /muk/ 'kind, type').

Nouns indicating units of time are also classifiers, e.g. \$257388526005536 /khnom
time of time are also classifiers, e.g. \$25738852605536 /khnom
time of time are also classifiers, e.g. \$25738852605536 /khnom
time of time are also classifiers, e.g. \$25738852605536 /khnom
time of time are also classifiers, e.g. \$25738852605536 /khnom
time of time are also classifiers, e.g. \$25738852605536 /khnom
time of time are also classifiers, e.g. \$25738852605536 /khnom
time of time are also classifiers, e.g. \$25738852605536 /khnom
time of time are also classifiers, e.g. \$25738852605536 /khnom
time of time are also classifiers, e.g. \$25738852605536 /khnom
time of time are also classifiers, e.g. \$25738852605536 /khnom
time of time are also classifiers, e.g. \$2573885260556 /khnom
time of time are also classifiers, e.g. \$2573885260556 /khnom
time of time are also classifiers, e.g. \$2573885260556 /khnom
time of time are also classifiers, e.g. \$2573885260556 /khnom
time of time are also classifiers, e.g. \$257388526056 /khnom
time of time are also classifiers, e.g. \$257388526056 /khnom
time of time are also classifiers, e.g. \$257388526056 /khnom
time of time are also classifiers, e.g. \$257388526056 /khnom
time of time are also classifiers, e.g. \$257388526056 /khnom
time of time are also classifiers, e.g. \$257388526056 /khnom
time of time are also classifiers, e.g. \$257388526056 /khnom
time of time are also classifiers, e.g. \$257388526056 /khnom
time of time are also classifiers, e.g. \$257388526056 /khnom
time of time are also classifiers, e.g. \$257388526056 /khnom
time are also classifiers, e.g. \$257388526056 /khnom
time are also classifiers, e.g. \$25738852605 /khnom
time of time are also classifiers, e.g. \$257386056006 /khnom
time of time are also classifiers, e.g. \$25738606 /khnom
time of time are also classifiers, e.g. \$25738606 /khnom
time of time are also classifiers, e.g. \$2573860 /khnom
time of time are also classifiers, e.g. \$2573860 /khnom
time of time are also classifiers, e.g. \$2573860 /khnom
time of time are also classi

Nouns which are most commonly encountered as classifiers are:

nna	/kbaal/	copies of books, volumes; livestock
2/3	/knoon/	houses
R	/kuu/	pairs of things
t mu'	/krop/	pellets, grains, tablets, bullets
इंट्रिक्ट) क्ष	/kr i əŋ/	machinery
త్త్రగార	/cbap/	copies of pamphlets, newspapers, magazines
	/daem/	
B°	/dom/	pieces and lumps
S,	/tuo/	letters of the alphabet, vehicle bodies, characters in a play
es Ps'	/n6?/	ordinary people
ဥၯႄႜၯၯႄ	/prodap/	suits of clothing; sets of tools and equipment
& G.S.	/pha en/	disks
ษา"ัธา	/mat/	words, utterances, mouthfuls
រួម	/ruup/	pictures, shapes, forms, images, persons
พฐห	/sonlek/	sheets of paper, leaves
ဆ႑မာဗ	/somrap/	sheets of paper, leaves suits of clothing; sets of tools and equipment
55 H	/sn/	monks, exalted people, images of Buddha

Before a classifier the number yes /mioy/ 'one' is reduced to /me/ in normal speech, e.g.

parages 25 /sraa medoop/ 'one bottle of liquor.' Other numbers are not affected.

In normal casual speech classifiers are omitted, except for \$75 / n6? / 'person.'

For some nouns, e.g. rooms and furniture, classifiers are almost never used. Use of classifiers is a signal of formal style; classifiers occur far more often in writing than in speech.

S.2.1.3 Word Order in the Noun Phrase

In contrast with the English noun phrase, in which the order of elements is fixed, there is considerable freedom in the Cambodian noun phrase. The primary restrictions on the Cambodian noun phrase are the following:

- 1. The demonstrative ('this, that') is normally the last element in a noun phrase, e.g. 197123 " /khmaw day khñom pii nih/ 'these two pencils of mine' (19722 /khmaw day/ 'pencil' /khñom/ 'I' 671 /pii/ 'two' 18: /nih/ 'this'). Note that a phrase containing 18535 /reboh/ 'property of' may either precede or follow the demonstrative, e.g. 187618:1853 /khmaw day pii nih reboh khñom/ 197618:185328: /khmaw day pii reboh khñom nih/ both of which mean 'these two pencils of mine.'
- 2. A pronoun in a noun phrase may not follow the number unless it occurs in the phrase \$SSRS /rebch/ 'belonging to' plus pronoun, e.g. /khmaw day pii nih rebch khnom/ 'these two pencils of mine.'

1.2.2 Verb Phrases

The main type of construction in verb phrases in Cambodian is attribution. Verbal ttributes occur following the main verb of a predicate or preceding it.

.2.2.1 Postverbal Attribution

Attributes which follow a verb may be:

l. a verb

- a. an action verb, e.g. & especients/niviey leen/ 'to joke, to say in fun' (& especients / niviey/ 'to speak' & or / speak' & o
- b. an adjective (stative verb), e.g. Renewand /niviey cbah/
 speak clearly (End) /cbah/ *to be clear*).

[,] When the number is followed by a classifier the adjectives must precede the number.

2. a noun, e.g. keneusususus /niyiey voppethóa/ 'talk using elevated style' (fynus /voppethóa/ 'culture').

When the verb occurs with an indirect object, e.g. 923 /aoy/ 'to give,' the situation is more complex. Here the order is:

fer plus direct object plus indirect object plus quantifier, e.g. Germen, e.g. fermen, e.g. ferm

If any portion of this is deleted, the order of the remaining components remains the same. For example, if the direct object of the partial part of the direct object of the partial p

- 3. an indefinite, e.g. Reviews / niview mec/ 'how is it said?'

 (sww /mec/ 'how, why').
- 4. an adverbial, e.g. kenerry way (niyiey thommedaa/ 'to speak in an ordinary way' (niyiey thommedaa/ 'ordinarily').
- 5. a phrase, e.g. ຂໍເອາເອກກຸກ ກົກສະສ /niyiey ñop cian kee/ 'to speak fastest of all' (ກາງປ່າກົດກ/ 'rapid' ຂົກສ /cian/ '(more) than' /kee/ 'they').

6. a clause, e.g. えいいかいかいかが対かい /niyiey taam kot bonkop/ 'to speak according to (how) he ordered' (おび /taam/ 'according to, (following)' おお /kot/ 'he, she, they' ひばり /bonkop/ 'to order').

S.2.2.2 Preverbal Attribution

In preverbal attribution, a main verb may be modified by:

- 1. a verbal auxiliary (treated in greater detail at V.2.1), e.g. \$\int_{\mu}^{\beta}/\trew/\ \must.\ \text{*must.*}}
- 2. an adverb
 - a. a negator, e.g. B&&conco /min niyiey/ 'didn't speak'

 (B& /min/ 'not').
 - b. a preverbal adverb, e.g. 25:25 & conce /ceh tae niyley/
 'always speaks' (25:25 /ceh tae/ 'always').
- a verbal

 - b. an action verb, e.g. and e.g. action verb, e.g. action verb,

S.2.2.3 Two-Part Verbs

There are two types of two-part verb constructions resultative verbs and verbs followed by an attributive motion verb.

S.2.2.3.1 Resultative Verbs

A very frequent attribution pattern in Cambodian is to follow a main verb by another which describes its possibility, its state of completion, or its result, e.g. significantly made and to have read to have read to have read to look at, to read \$75/dac/ 'to break apart').

This is not an ordinary case of a verb modifying a verb as described above in S.2.2.1, since in the case of an ordinary verb negation precedes the main verb, e.g. \$88097-css \$25 /min niyiey leen/ 'to not say in fun' (\$25 /min/ 'not' \$29725 /niyiey/ 'to speak' \$65\$ /leen/ 'to play'). However, in the case of a resultative verb, the negator

precedes the second verb, e.g. 280088376

/meel min dac/ 'to be unable to read."

Verbs which commonly occur in the second position in a resultative werb area

- 1. 27 & /khaan/ 'to fail,' e.g. 25 % 27 & /moo min khaan/ 'will certainly come' (25 % /moo/ 'to come'). 27 & /khaan/ is generally used with a negative.
- 2. \$ 29 mg /kheen/ 'to see, catch sight of,' e.g. \$\text{37} \text{20 mg} /rob' kheen/

 'to find' (\$\text{57} /rob'/ 'to look for').
- 3. GU /cop/ 'to finish' e.g. \$\(\) & \(\) \(\) / rien cop/ 'to finish studying' \(\) \(\) \(\) / rien/ 'to study').
- 4. இல /coul/ 'to enter, go in; can' \$5)கக்கதல /rien min coul/
 'can't learn' (\$\$)க /rien/ 'to study').
- 5. 2200 /cen/ 'to go out,' e.g. 常新記名2200 /kit min cen/ 'can't think of anything' (常都 /kit/ 'to think').
- 6. \$300 /csh/ 'to know (how to)' e.g. \$3)&\$38\$60 /rien min csh/
 'to study without learning' (\$3)& /rien/ 'to study').
- 7. a. かが /cop/ 'to stick; to win an election, to pass a test' e.g.

 「いられいが /proloan cop/ 'to pass a test' (「いられ /proloan/

 'to take a test'). The opposite of 「いられいが is 「いられかが /proloan this?' 'to fail a test' (なが /this?' 'to fall').
 - b. 276 /dac/ 'to break apart' e.g. \$\sum 2500 276 /meel dac/
 'to be able to read' (\$\sum 2500 /meel/ 'to read, to look at').
- 8. \$\mathfrak{S}' /t\(\delta n \) 'to catch up with, to be on time' e.g. \$\mathfrak{S} \mathfrak{S} \mathfra
- 9. \mathcal{R} /thum/ 'to smell' \mathcal{L} \mathcal{R} \mathcal{R} /het min thum/ 'to be unable to smell' (\mathcal{L} \mathcal{R} /het/ 'to sniff').
- 10. And /this? 'to fall' fry And /run this? 'to push (it) off' (fry /run 'to push').
- 11. \$7 \$ /bean/
 - a. 'can, to be able' e.g. \$5 \$ \$7\$ /pres bean / 'can use (\$5\$ /pres / 'to use')

- b. 'to get, acquire' e.g. \$\sin' \mathbb{E} \sin' \sin' \mathbb{E} \sin' \sin' \sin' \sin' \mathbb{E} \sin' \sin' \sin' \sin' \mathbb{E} \sin' \sin'
- 12. \$\frac{1}{25}\$ /phot/ 'to get free of, clear of ' \$\frac{1}{25}\$ \frac{1}{25}\$ /dae phot/ 'to walk clear of' (\$\frac{1}{25}\$ /dae/ 'to walk').
- 13. 35 /ruoc/ 'to finish' 335 /thee ruoc/ 'to finish doing' (35 /thee/ 'to do, to make').
- 14. い方' /lú'/ 'to fall asleep,' e.g. ころかい方' /deek lú'/ 'to sleep soundly'
 (まるか /deek/ 'to lie down, go to sleep, to sleep').
- 15. \$\frac{\partial to be ready, finished \frac{\partial to have done already.'}
- 16. En /144/ 'to hear, 'e.g. Any was /sdap min lii/ 'can't hear' (Any was /sdap/ 'to listen').

S.2.2.3.2 Attributive Motion Verbs

In many cases an action werb may be followed by an attributive motion werb from the following lists

**F7 /tim/ 'go (away from speaker)'

**EFF /cen/ 'to go out'

**F7 /lasn/ 'to ascend'

**F7 /m6o/ 'come'

**F6 /coul/ 'to enter'

**F6 /coh/ 'to descend'

In some cases the attributive motion verb simply adds its meaning, e.g. \$\sim_{\text{op}} \sim_{\text{op}} \

In some other cases the combination of verbs is idiomatic; that is, the whole is different from the sum of the parts. An example of such an idiom is \$\sigma^2 \frac{1}{2} \text{ } /chap laen/ 'hurry up' (\$\sigma^2 \frac{1}{2} /chap/ 'quick'). It happens that this idiom corresponds almost word for word to its English translation, but remember that in English 'hurry up' is an idiom too.

The motion verbs [67] /thw/ 'to go' and [6] /coh/ 'to descend' have also been frozen as imperative particles, e.g. Scarcus; /niviey coh/ 'go ahead and say (it).'

104 /thw/ marks a command, e.g. 1860 /meel thw/ 'read it;' [6] /coh/ usually has a connotation of giving permission. In time expressions /moo/ 'to come' gives a meaning of 'approaching the present from the past,' e.g. 1000 % /kraoy moo/ 'later on (in the past),' while 167 /thw/ 'to go' gives a sense of extension into the future, e.g.

186 / 186

S.2.2.4 Preverbal Word Order in the Verb Phrase

Normal preverbal word order in a verb phrase with only one main verb is:

He never wants to start studying.

Deletion of any of these elements does not affect the order; e.g. if Es /min/ 'not' is deleted, the sentence above is:

ភាស់ខេះវិសិធិស័យប់រៀន។ kốt cehtae con cap men

He always wants to start studying.

In literary style a preverbal adverb or auxiliary may occur before the subject, e.g.

prising via móo s⁷ack

must he come tomorrow

He must come tomorrow.

^{3.} The word 'future' here is relative to a time indicated in the context, not necessarily to the time following the utterance.

This sentence is a literary variation of the more commonly used \$755 \$755 /vis
traw moo s?ask/ 'He must come tomorrow.'

In many cases there is more than one main verb, either because a set of coordinate events is described without coordinating relators or because a sequence of events is described by a sequence of verbs. An example of the first type is:

run tien kroveen-krovot viey-vot rot-riey and rolliey pil 144 phasendsy
push pull jerk-across jerk-back hit jerk back-to whip break-up-cause melt from on earth.
Push them, pull them, jerk them back and forth, so they will disappear from the face of the earth.

In this example there are eight coordinate verbs (from [Fig] /run/ to Frew /riey/) and two verbs in constructions Gen /aoy/ 'to give; cause' and Farrer /roliey/ 'to melt.'

Thus there are ten verbs stacked up, and to sort them out you need to know about Cambodian structure.

An example of the second type, in which the verbs appear in the sequence in which the actions they describe occur is the following:

INTIME BOSSME ON THE TOTAL CONTROL OF SECULTS OF SECURTS OF SECULTS OF SECULTS OF SECULTS OF SECULTS OF SECULTS OF SECURTS OF SECURT

In this example there are nine verbs, all in sequence. Note that they cannot all be translated into English.

This kind of construction may not seem so strange to you if you think of a construction like;

Defense Language Institute Language Materials Preparation Project Funds which is perfectly acceptable English. Here there are eight nouns coming one after another. It happens that Cambodian does not stack nouns up like this, and English does not stack up verbs. But in both cases an elementary knowledge of grammar is sufficient to permit the learner to sort out the structure.

S.3 Clauses

In English most clauses have the structure subject-verb-object, with the possibility of an added topic before the subject, e.g. 'John, we saw him yesterday.' The majority of Cambodian clauses also have this structure (optional components in parentheses):

(topic) + (subject) + verb⁴ + (object)

as well as assorted adverbials and auxiliaries discussed in detail elsewhere. An example of a clause with all the major components is:

RISISISISIS ARTICLE TOUY

kasast nih kee lu? craen chap

newspaper this they sell many copy

This newspaper, they sell many copies.

If the topic has the same referent as another nominal in the clause, that nominal is either omitted, e.g.

markets and some state of the puo? much khnom stop nah group that I hate very I really hate that bunch.

or else a pronoun replaces ita

medaay khnom kot slap tiw yuu haey
mother my she die (to) long-time already
My mother, she died a long time ago.

(object omitted)

Dependent clauses also have this word order but do not usually include a topic. Attributive clauses are introduced either by FROS /dasl/*which, that or by no word at all (cf. S.2.1.1.5), e.g.

Rang (Rang) store for Bords of so Sep & 4

seh (dael) ceh khmae men bac rien tiet

student (who) know Cambodian not-need study further

Students who know Cambodian need not study any more.

The word FRS /dagl/ also means 'the one(s) that, 'e.g.

dael yeen trew-kaa yeen yoo tiw ones-that we need we take to The ones we need we'll take along.

In this position sais obligatory, to omit it takes away the meaning of the sentence.

Another use for Res is in a predicate nominative type of construction in which there is no verb, e.g.

sylving (sever) shows on soft; say rien min (hasy) dash khnom lit min phtsh kee story that (already) that I hear at house he/they It was that story that I heard at his house.

This construction is particularly characteristic of literary style.

Adverbial clauses are introduced by appropriate clause relators. The most general of these is \$200 /daoy/, which indicates that the action in the clause it introduces is a contributing factor to the action of the clause to which it is related, e.g.

ERRIPEISION STATES EN SECTION Y

kee da?-tooh via daoy via thee-baap kruu

they punish him given-that he mistreat teacher

They punished him for giving the teacher a hard time.

Other, more specific, clause relators, e.g. 800/kaal/ 'when' or \$500 are treated below at R.3.2.

Clauses which are embedded in other clauses as indirect discourse or as indirect

questions maintain the usual word order, e.g.

via chlasy than mdasy min-ton sruol-khluon
he answer that mother not-yet well

He answered that his mother was not yet feeling well.

Here the embedded clause is exclusion of this mother is not yet feeling well. When it is embedded it undergoes no change at all. In line with this absence of effect on the embedded clause, a topic can occur in the embedded clause with complete freedom. Thus, for instance, the embedded clause of the above example could as easily be example. An Endow of the could as here, and the support of the could be above example could as she's not well yet.

5.4 Sentences

A sentence consists of at least one clause. A sentence may be positive, negative, or interrogative. Characteristic of sentence level constructions are the indefinites, a group of words which are treated at the end of this section.

S.4.1 Sentence Composition

Clauses are combined into sentences by coordination, subordination, and embedding.

S.4.1.1 Coordination

Coordination of clauses is accomplished either by placing the coordinated clauses next to one another (parataxis) or by use of a clause relator.

An example of parataxis is:

ອງຄົບກົ້ອກາດນັກກາ khyol bo? slek chee this? wind blow leaf tree fall (when) the wind blows, the leaves fall.⁵

Only intonation and a slight pause indicate the boundary between the two clauses.

^{5.} This first clause could also be subordinate in some contexts-cf. S.4.1.2.

There is a set of clause relators the members of which coordinate clauses (cf. R.3.1). The most important of those are \$2700 /haey/ 'and,' & /rit/'or,'258 /pontae/ or \$37 /tae/'but,' and \$7 /kit/'that is to say.' For example.

Fright Ency Strange 4 via thee bear has khnom som? ast phteh he make rice and I clean house
He cooks and I clean house.

S.4.1.2 Subordination

For the most part subordination is accomplished by a member of the set of clause relators treated below at R.3.2, e.g. 256775pruh/ 'because' or 255 /bae/ 'if.'

sign socrassory
bas khnom mian luy khnom taw
if I have money I go
If I have money, I'll go.

Adjacent clauses may form a sentence that can be translated into English with a subordinating conjunction; however the exact relation between the clauses can be determined only from context.

Park of the state of the khnom mian luy khnom the khnom mian luy khnom the I have money I go

If I have money, I'll go. (or 'When I have money,' or 'Because I have money.').

S.4.1.3 Embedding

Embedding occurs most frequently in relative clauses and indirect discourse. Relative clauses (cf. S.3 above) may be introduced by the word $\mathcal{E} \mathcal{D} \mathcal{D} / \text{dagl} / \text{but often are not.}$ In indirect discourse the embedded phrase or clause is usually introduced by $\mathcal{E} > /\text{thaa}/$, which literally means 'to say' but before an indirect statement or question means 'that;' e.g.

rappy of Grant States of the properties of the properties of the come already.

They told (me) he's come already.

The word \mathcal{E} ? /than/ 'that' also precedes direct quotations, so that the above example could be translated 'they told (me) "He's come already." 'With \mathcal{E} /den/ 'to know (a fact)' under certain circumstances \mathcal{E} ? /cia/ is used instead of \mathcal{E} ? /than/. Specifically, \mathcal{E} ? /cia/ is used when the embedded clause has no subject and indicates that \mathcal{E} /den/ is negative, e.g.

ARRITHER SERVERY
khnow den cia tiw rii min tiw tee
I know that go or not go (negation)
I don't know whether (he's) going.

In a positive sentence of this sort $\hat{\mathcal{L}}$? /cia/ is not used; in a negative sentence either $\hat{\mathcal{L}}$? /cia/ or $\hat{\mathcal{E}}$? /than may occur, e.g.

ខ្លឹមនដឹងជារទេ។ ប្រទិនរទេ។ khnom min den cia tiw rit min tiw tee thas

I not know that go or not go (negation)

I don't know if (he's) going or not.

If \mathcal{E} ? /than/ is used in a negative sentence, a negator, e.g. $\mathcal{E}\mathcal{S}$ /min/ not, must precede $\mathcal{E}\mathcal{S}$ /den/; if \mathcal{E} ? /cia/ is used, the negator is optional. When the embedded clause contains a subject, $\mathcal{E}\mathcal{S}$ /den/ must be followed by \mathcal{E} ? /than/ whether positive or negative, e.g.

E(ER) HEGIFIERE EREFIERY
khnom (min) den thas vis tim rii min tim tee
I (not) know that he go or not go (negation)
I (don't) know whether he's going or not.

Both $\hat{\mathcal{G}}$? /than/ and $\hat{\mathcal{Z}}$? /cia/ may be omitted.

S.4.2 Sentence Types

Other than the ordinary positive type of sentence there are negative and interrogative sentences, much as in English.

S.4.2.1 Negative Sentences

Negation is accomplished by means of a negator particle (cf. A.2) of /pum/, Sa /man/, or Sa /ot/ occurring before the main verb (cf. S.2.2.4 for a description of the position of the negator in the clause). More frequently than not at the end of the clause the final particle 38 /tee/ is used, e.g.

*ลู้ซิธธิ์สิสธรร*ฯ

khnom min den tee.

I not know (negation)

I don't know.

In the case of indirect discourse, & /tee/ may either precede the embedded clause, e.g.

ลู้ยิ่นใช้สรรชาภาษหฯ

khnom min den tee thas vis moo

I not know (negation) that he come

I didn't know he was coming.

or follows its

ลู๊ฮลิสัมธิกราษพรรฯ

khnom min den thas vis moo tee.

I didn't know he was coming.

Other negator words which can also be used with /tee/ are \$\frac{1}{2} \text{SPK /min ton/ 'not yet,' \$\frac{1}{2} \text{NN/min dasl/ 'have never' and \$\frac{1}{2} \text{SPK/min bac/ 'need not.' In all cases \$\frac{1}{2} \text{NN/min or \$\frac{1}{2} \text{N} / ot/ can be substituted for \$\frac{1}{2} \text{K/min/.}

S.4.2.2 Interrogative Sentences

Interrogation is a somewhat more complex matter in Cambodian than is negation.

There are basically two types of interrogations alternation questions and information questions. Any question, whether direct or indirect, alternation or information, may be

preceded by the particle se /tae/, which announces that a question follows, e.g.

इस के सिर्म १६ व

or อู้ สมุลผิว รสริจาสี มรรฯ

tae via den tee

khnom suo (thaa) tae via den tee

question he know (negation)

I ask (that) (question) he know (negation)

Does he know?

I asked if he knows.

\$8 /tae/ is never obligatory; it is used mostly in formal discourse.

S.4.2.2.1 Alternation Questions

An alternation question is asked by coordinating two alternatives by the clause relator \mathcal{G} /rii/ 'or,' e.g.

រលាករមិលប្រសា្តប′? look meel r±± sdap

sir read or listen

Are you reading or listening?

A special case of an alternation question is the kind that asks 'yes or no?', e.g.

રભાષા જ્યાર કર્યા છે. જે કરા જાત કરા જા

look meel rim meel tee

sir read or not read (negation)

Are you reading or aren't you?

This sentence may be reduced to:

รงมนะเลิงเกิระ 5

look meel rit tee

are you reading or not?

with no meaning change, and still further reduced to:

รภาคาเชิดเลอ

look meel tee

Are you reading?

This last is the normal form of a confirmation (yes-no) questions that is, the normal affirmative clause is followed by /tee/ and has rising intonation. Another reduction of

SSS /rit tee/ is to SS /rit/. This also asks a confirmation question (cf. A.3.4g), e.g.

ERSESSEY?

kee csh thee rit?

they know-how do or

Do they know how to do it?

g in this usage can also be a reduction of graft /rit sy/ 'or what?'

Another case of an alternation question is the SENCESS //haey rit niw / question that asks 'have...yet?', e.g.

son new order of the series of serie

This kind of question can be reduced in casual speech to SISA /riniw?/.

S.4.2.2.2 <u>Information Questions</u>

ಸ್ಟ್	/n6?naa/ *who*	from	₹v#	/n6?/	*person*
ച്ച	/acnaa/ 'where'		2	/22/	*at*
ന്നങ്ങന	/kaalnaa/ *when (non-past)*		Mes	/kaal/	*time*
* ๛ระหาด	S/pii mkaal/ 'when (past)'		જ	/pii/	'from'
รณ ฆ่ <i>ห</i> ฐ	/hast sy/ 'why?'		8EN ಶೆಸ್ತಿ	/hast/	reason'
ยรา"นี้ ระยั่ย	/yaan mec/ thow, whyt				'style, way'
इस्ट्रें भू	/thee sy/ 'for what purpose'		इ क्रु	/thee/	'to do, make' 'medial particle'
* 85 67	/thee sy/ 'for what purpose' /mec kee/ 'why, how'		Ř	/koo/	'medial particle' (cf. A.3.3)

In English when we ask a question we generally start the clause with the question word, e.g. 'whom did they see?' However, in Cambodian the word order in an interrogative sentence is exactly the same as that of the affirmative sentence to which it is related and which is its fullest answer. For examples

In both cases the word order is subject-verb-object.

The following words may (but need not) occur in the sentence initially even though they are not the subject of the sentence; ASA (pii) onkaal when, set mec/ how, why, 2 m/asnaa/ where, mosen /kaalnaa/ when, sense/ hast sy/ why, est sef/yaan mec/ how, why. For examples

2) AM EM CUST? or SM CUST? (ER) DAM?

a snaa mdaay via? mdaay via (niw) a snaa?

where mother he mother he (at) where

Where's his mother? Where's his mother?

One such word, ses /mec koo/ always occurs clause initially, e.g.

reference study
why aren't they studying?

The word of /ey/ 'what' (or colloquially, & /s'ey/) may be used attributively, e.g.

[772] /laan ey/ 'what kind of car.' When it contrasts in this position with and

[182] /which (one), and and means 'which specific, individual one, and and and explose what kind of. For example, first /laan ey/ is 'what (kind of) car' but first and

[182] /laan maa/ is 'which car (of several cars we know about).'

S.4.3 Indefinites

T. 3-02 .34-

In English we have a set of question words, e.g. who, what etc. In addition we have indefinite pronouns many of which are related to these question words, e.g. whomever, anything, nothing, no-one, wherever, etc. In Cambodian there is one set of words which do all the things English question words and indefinite words do.

There are five basic indefinites which combine with other words to form the full set of indefinites. The basic indefinites are listed below with the kinds of grammatical unit for which they substitute:

	Indefinite	Substitutes for
A)	/sy/ *what, whatever, anything, nothing, none*	noung attributive
_	/s?sy/ colloquial version of By /sy/	noung attributive
AM wherever	/naa/ *which, whichever, any, not anywhere, , anywhere, nowhere	attributive noun indi- cating location
สหาก	/onkaal/ *when, whenever*	noun indicating time
કર્ક્ક છ	/mec/ *how, why, however, any way, in no way*	clause; phrase
રહ્યું છ	/mdec/ is a more formal version of \$25'E'/mec/	
y BJB	/pormaan, pemaan/ *how much, however much, any amount*	a quantity

Compound indefinites (cf. also S.4.2.2.2) combine a basic indefinite and another word to make a compound which occurs in the same syntactic positions as the basic indefinites. Compound indefinites area

ff firm /n6?naa/ 'who, whoever, anyone, no one'	noun designating a person
2000 /agnaa/ *where, wherever, anywhere, nowhere*	noun designating a place
mnon/keal nea/ when, whenever, at any time, at no time	noun designating a time
20/27 ਮੁੱਤ /hast sy/ 'why, for whatever reason, for any reason, for no reason'	clause
fiff /thee sy/ 'for what purpose, for whatever purpose, for any purpose, for no purpose'	clause
cxා ්ය හා හි (jaan mec / 'how, why; however, whyever, any way, for any reason, no way, for no reason'	clause
\$\$ am /pennaa/ 'how big, what size'	noun or demonstrative indicating size

Examples of uses of indefinites follow, arranged according to their English translation.

In most cases examples are based on /ne?naa/ *who, etc.*

Who

serson chief?

nernaa con tiw?

who want go

Who wants to go?

everyone

รุรกิภาที่มีมีมีมีรา nernaa koo den das who (particle) know also Everyone knows (that).

no-one, not anyone

justing of the second of the s

whoever, anyone who

MANAGE: MANAGETERS

Management of the state of the state

someone (who)

SEEFFY) SEEFF OWY (EXIS) SEE: 9

khnom trew kas net nead (das1) ceh

I need who (that) know-how

I need someone who knows how.

anyone

spranktoky
nenaa koo baan
who (particle) o.k.
Anyone will do; anyone is o.k.

someone

្រម ហែលខ្ញុំសា្តល់អ្នកណា នៅញឹង។

prohael khnom skol ne?naa niw nin

maybe I know who at that

Maybe I know someone there.
(But equally often 'someone' is translated for /kee/, まかいででんっている。mane'/, およならないが/menuh mene'/, or just シャガ/mene'/。)

however many

រកចាប់ក្រីពុនតាងប៉ុន្មានលក់តាំងប៉ុស្តាំង។

kee cap tray baan ten pomman lus ten ponnan

they catch fish get all how-many sell all that-much

However many fish they catch they sell (they sell

all the fish they catch).

as much as

อง องเลียง

ñam pommaan koo baan dae

eat/drink how-much (particle) can also

You can drink as much as you like.

Word Classes

Introduction

Cambodian words can be divided into four major classes on the basis of the other words they occur with (syntactic criteria) and on the basis of internal similarities between members of the same class (morphological criteria). The four classes are:

- Nominals: words which can serve only as subject but not as predicate
 of a major clause.
- Verbals: words which may serve either as predicate or as subject of a
 major clause.
- Adverbials; words which can be neither subject nor predicate and which
 do not connect any two units.
- 4. Relators: words which can be neither subject nor predicate and which connect two phrases or two clauses.

and the second second

garage and the same of the

^{1.} There are minor clause types in which a noun serves as predicate.

Nominals

There are three types of nominal in Cambodian; pronouns, demonstratives, and nouns.

Nel Pronouns

Cambodian can use either a pronoun or a noun in positions where English uses a pronoun. Where pronouns are used, they are not inflected; that is, they do not indicate person, number, gender, or case. However, where there is more than one pronoun corresponding to one English word, the relative age or status of the speaker and the addressee or the person to whom a third-person pronoun refers will determine the choice of pronoun.

N.1.1 First Person

N.1.1.1 Singular

/khnom/ 'I' is the usual and most neutral first person singular pronoun. A foreign speaker can safely use in almost all circumstances. (Originally meant servant, slave' and as a noun still has this meaning, though it usually occurs in construction with another word as a noun, e.g. **STST*/khnom bomrae/ 'servant.')

 \mathcal{SF} /an/°I° is used when the addressee is intimate with the speaker, much younger, or of inferior social status. The corresponding second person form is $\lambda \beta$ /asn/°you.°

/knia/ "I" is used when the addressee is intimate or very friendly with the speaker.

ser's /yeen/ 'I' is used when the addressee is intimate or very friendly with the speaker. It is used mostly in Phnom Penh, especially among girls from the upper classes. In writing ser's /yeen/ is also used to represent 'I' when a god speaks.

AND /astemas/ or AND MY /astemasphiap/ 'I' is used by a Buddhist monk.

្សុំស្វាទ /khnom bast/ 'I' is used by a man to show deference.

And /nian khnom/ "I" is used by a woman to show deference.

/khñom (préh) kerunaa/ is used by a layman when speaking to a monk or to someone of royal blood.

N.1.1.2 Plural

ser /yeen/ 'we' This is the general, neutral form.

sers /yeen khnom/ 'we' Another generally used form.

Addressing a Buddhist monk or person of royal blood.

Titles and appropriate kinship terms are also used to refer to oneself, e.g.

PRISCOSE /p?oun min den tee/ is literally 'younger sibling doesn't know' but in some contexts means 'I don't know,' if the speaker has a relation to the addressee such that the speaker could be addressed as **TA** /p?oun/ 'younger sibling.'

N.1.2 Second Person

/A /am/ is used with an intimate, much younger, or socially inferior addressee.

Singular / corresponds to the first person form *** /am/.

In all other cases the person's name, his title, or a kinship noun appropriate to his age and status is the appropriate form of address. The ways of addressing and referring to people using nouns rather than pronouns is discussed below at U.3. However, some examples are given below:

form; /look kruu/ 'teacher' used with one's male teacher (female equivalent; /n6' kruu/ 'teacher').

/puu/ 'uncle (younger than one's parent)' used with a male of similar or lower social status who is of the same age as one's parents or a little younger. (female equivalent: EA /miin/ 'younger aunt').

ຄົງ /sok/ or ຄົງຊາລິ /sok asn/ 'Sok' (a name) used with contemporaries, juniors, and inferiors. Used with members of either sex.

N.1.3 Third Person

There is no number distinction in Cambodian third-person pronouns; all of them may have one or many referents.

\$785' /kot/ is used to refer to individuals, especially those whom one respects.

It would not be used to refer to one's juniors or social inferiors. It must be used in referring to one's parents, older relatives, teachers, etc. A wife normally refers to her husband as \$\text{E} \begin{array}{c} \begin{array}{c} \delta \text{Dom/.} \end{array}

/kee/ is used for casual acquaintances, people whose relationship to the speaker is distant, people of uncertain identity, people to whom one is fairly close, and one's juniors. It is also the form used for impersonal expressions in which 'they' is used in English, e.g. 12767 /kee than 'they say...' You will be tempted to use \$\intternable{\infty} \sigma' /k\deltat / for 'he/she' and \$\internable{\infty} \sigma' /kee for 'they' because of your English habits, but remember that the important thing in Cambodian is not number but relationship between speaker and referent.

/via/ is used to refer to things, animals, small children (especially one's own), intimates, and social inferiors. It is also used, especially in casual speech, as an expletive like 'it' in English 'it is hot,' e.g.

khnom thas vis kdaw nah

"I say it's very hot."

Literary style, however, does not use this expletive? and you should probably avoid it until you have a good idea of the kinds of circumstances in which it is used, since they will not necessarily conform to English usage.

As was the case in the second person, titles, kinship terms, and names can be used where English would use a third-person pronoun. For example: 25557570752000 /boom time saalaa hasy/ can mean 'He has gone to school already' (2556 /boom/ in fact means 'older sibling' but in appropriate contexts can be used where English would use a pronoun).

The normal translations of 'he, they' for Buddhist monks are Entry look / 'sir, lord' or for set /preh on / '(holy) body.'

Pronoun usage is also discussed in the chapter on Vocabulary and Usage.

N.2 Demonstratives

The three most common Cambodian demonstratives \$23 /nih/ \$873/muh/, and

2) alone, e.g. \$20.20 \$20 min cia rien thom hasy/ that is a grave matter.*

Following a locative word like \$87 /niw/ the demonstratives mean there, there, there, e.g.

รสารละขาลยลุญรรุธิละตก

niw nih mian memuh craen peek
There are too many people here.

In meaning \$2.2 /nih/ corresponds well to English 'this' and \$2.2 /nuh/ to 'that,' but \$\tilde{\pi} \beta /nih/ may be translated either 'this' or 'that' depending on the context in which it occurs. In fact the meaning of \$\tilde{\pi} \beta /nih/ is something like 'the one I'm talking about, the one under discussion,' e.g.

min hasy
'That's its ves.'

fare /muh/ and \$\vec{\pi} \beta \ /min/ may be used in casual style at the end of a verb phrase to indicate that the action is going on at the time of speaking, much like English 'there' ins

នលាកន្ទើទីហ្គឺង់ ? look thee ey nin

'What are you doing there?'

Less common demonstratives are: \$\int_{\non/\text{*yonder}}\, \text{ over there,* which has a kind of pointing connotation, and \$\int_{\non/\text{k}}\, \non/\text{ which has the same meaning as \$\int_{\non/\text{k}}\, \non/\text{ but is limited to spoken usage; it is not characteristic of written usage.

N.3 Nouns

In English, nouns are inflected for number (singular vs. plural), e.g. boy, boys, and in many European languages they are inflected not only for number, but for gender (masculine, feminine, neuter) and case (nominative, genitive, dative, etc.) as well. However, in Cambodian nouns are not inflected at all; a noun keeps the same form no matter what its

^{2. /}nin/ is Phnom Penh promunciation.

syntactic environment. Thus a noun like [33] [337] /sephiw/ means either 'book' or 'books.'
Generally the context in which the noun is used is sufficient to make the number clear if such clarity is necessary.

To be sure, while nouns are not inflected, there do exist ways of specifying such common Indo-European categories as number. For instance, the word of the word of specifying such can be followed by the word of the word of

Case relations (actor, goal, location, etc.) are expressed by paraphrastic or syntactic means, e.g.

khnom aoy luy kot

I'll give him some money.

in which $\frac{2}{3}$ /khnom/ "I" is the agent, as $\frac{2}{3}$ /kot/ "him" is indirect object. These functions are all determined by the positions of the three nominals relative to the verb $\frac{2}{3}$ /aoy/ "give" and to each other.

There are three types of noun with respect to compositions root nouns, complex nouns, and compound nouns. Root nouns cannot be analyzed into any smaller meaningful components, e.g. [Analysis] (hkaz/ 'dog, 'Alas (hesaz) 'newspaper.' Complex nouns include at least one prefix or infix, e.g. [Sis (honkas) 'to originate' (/bon-/ 'causative prefix' + /kast/ 'to be born, arise') or fines (sammuo/ 'question' (/suo/ 'to ask' + /-amn-/ 'nominalizing infix.') A compound noun is a noun composed of at least two other words, which if they are nouns may in turn be either root nouns or complex nouns, e.g. fines (kec/ 'matter, affair' + /kaa/ 'work, matter') or fines (sammuo-comlasy/ 'questions and answers' (/sammuo/ 'question' + /comlasy/ 'answer').

N.3.1 Complex Nouns

In most cases, complex nouns are <u>derivatives</u> of root nouns. That is, both the root noun and the complex noun are members of a group of words which are related in both form and meaning, e.g.

/kaət/ 'to be born'

| Kaət/ 'period of the waxing moon'
| Kamnaət/ 'birth, origin'
| Kamnaət/ 'to found, to originate'

all of which are formally related by the sharing of the phoneme sequence /kaet/ and semantically related by the idea of birth, rising and the like. With exceptions as noted below, these affixes are not fully productive; that is, you cannot freely add an affix to a root noun (or any other kind of base) to get a noun that is acceptable to native speakers or which bears the same semantic relation to the root word as the model on which you made your analogy. This means that you will have to learn derivatives as separate vocabulary items, but the similarities between members of a derivative group like the similarities group above may help you recognize and learn new words faster.

Below are listed some of the most common affixes occurring in complex nouns.4

N.3.1.1 Prefixes

- l. ES / bon-/ 'nominalization of a root verb,' e.g. ESN /bontuk/ 'a load' from SN /tuk/ 'to keep, to put.' Note that this prefix is pronounced as follows:
 - a. /bam/ before /p,b/, e.g. v^{α} /bamp6?/ 'upper garment' from v^{α} /p6?/
 'to wear above the waist.'
 - b. /bon/ before /t, d, s, 1/, e.g. USS /bontuk/ 'a load' from SS /tuk/
 'to keep, to put.'

^{3.} These examples are taken from Huffman 1967 p.66.

^{4.} I am indebted to Huffman 1967 for much of the basis of the following treatment of prefixes and infixes; a fuller treatment of this aspect of Cambodian grammar may be found in his work.

- c. */bɔn/ before /c/ (there are no nominal examples for this rule, but verbs with the prefix \mathfrak{B}' /bɔn-/ follow it (cf. V.3.2.1 (8) below)).
- d. /bon/ elsewhere, e.g. van/ 'handle, railing' from \$78/kan/ 'to hold.'
- 2. [1] /pro-/ 'nominalization of root verb;' e.g. [1] /provaen/ 'length' from \$3% /veen/ 'long.'
- 3.50° /preh-/ (in fast speech /pre-/) 'sacred, royal' e.g., rows & form words relating to royalty. It is productive.
- 4. కో /me-/ from క్రామ్ /muoy/ 'one,' e.g. క్రైస్ /meyaan/ 'one kind of' from జాగ్స్/yaan/ 'kind'
- 5. 35 / sm-/ 'nominalization of a root verb,' e.g. 35 / smkat/ 'sector, quarter' from 53 / kat/ 'to cut.' This prefix follows the same pronunciation rule as 25 / bm-/ above.
- 6. It's /m-/ 'nominalization of a root verb,' e.g. It's mbach/ 'broom' from from the sweep.' This prefix follows the same rules as Ext /bon-/ above.
- 7. As? /aa-/ with adjectives and demonstratives means 'the...one,' e.g. As? \$\mathcal{S} \mathcal{E} \) /aa touc/ 'the small one' from \$\mathcal{S} \mathcal{E} \) /touc/ 'small.' With nouns, names, and pronouns it has a diminutive, derogatory, or intimate meaning, e.g. As? /aaphaalaa/, Phala (a name) (used with a child or inferior). This prefix is productive.

N.3.1.2 Infixes

The infixes are not given below in Cambodian script, since they will ordinarily be represented by a subscript consonant form or sub-syllabic vowel-consonant sequence. However, the examples are supplied in script as well as in transcription.

1. /-b-/ 'nominalization of root verb,' e.g. IN \$ /lbien/ 'speed' from IN \$ /lien/ 'fast.' If the root verb begins with /r/, the derivative begins with the syllable /ro/, e.g. IN /robam/ 'dance (n.)' from N /rom/ 'to dance.'

- 2. /-n-/ 'nominalization of a root verb,' e.g. \$28 /khnaet/ 'period of waxing moon' from \$78 /kaet/ 'to be born.' If the root verb begins with /d/ the derivative begins with /t/ (transliterated th); if the root verb begins with /b/, the derivative begins with /p/ (transliterated ph), e.g. \$2700 /thnaol/ 'punting pole' from \$2700 /daol/ 'to punt' or \$28 /phnaek/ 'a piece' from \$258 /baek/ 'to shatter.' If the root verb begins with /r/, the first syllable of the derivative is /ro/, e.g. \$8780 /ronôh/ 'a rake' from \$786 /rôh/ 'to rake.'
- 3. /-amn-/ 'nominalization of root verb.' This infix takes two forms:

 /-am-/ occurs in cases where the base begins with a consonant sequence, e.g.

 Steptize /*scmloo/ 'stew' from * /sloo/ 'to stew.' However, if the base begins with a single consonant, the infix takes the form /-amn-/, e.g. **** **Steptize /*scmmo/ 'question' from **** /suo/ 'to ask.' In some cases the vowel of the infix is /u/ (/-um-/, /-umn-/), e.g. **** /lum?oo/ 'beauty' from **** /l?oo/ 'good, pretty' or **** /cumn*** / 'illness' from **** /chi**/ 'sick, ill.' Base initial /p,t/ become /b,d/ before this infix.

In a few cases the base is a root noun, e.g. \hat{Z} $\approx 7 \mathcal{E}'$ cumnon/ 'generation, era' from $\hat{Z} > \hat{E}'$ /con/ 'floor, stratum.'

4. /-an-/ 'nominalization of root verb; e.g. NY 3/sambot/ 'oath' from Ay 3/sbot/ 'to swear.' In cases where the root verb begins with /p/ or /t/, (often transliterated ph and th, respectively), the derivative begins with /ban-/ or /dan-/ respectively, e.g. of 1/2 /ban'a cm/ 'dessert' from 1/2 /phiam/ 'sweet' or 5/2 / /cm /dambaan/ 'weaving' from /tbaan/ 'to weave.' This infix takes the form /-un-/ in 1/2 /punlit/ 'light' from 2/2 /plit/'to be light.' Note that this infix is pronounced as follows:

#\formaller / before /b, p/

ff & /-on-/ before /d, t, 1/

ff \formaller / on-/ before /c/

ff /-on-/ elsewhere

In many cases affixation is accompanied by a change in the quality of the vowel, e.g. Post /lbasn/ 'game' from for sold/leen/ 'to play.' Instances of this vowel quality change are not predictable and must be learned for each set of words individually.

N.3.2 Compound Nouns

Almost all Cambodian compounds can be analyzed as consisting of two parts; these parts can then be subdivided further in some cases. There are two types of compound.

Uncentered compounds⁵ are those in which neither element of the compound is modified by the other. In centered compounds⁵ one element is modified by the other.

N.3.2.1 Uncentered Compounds

There are three types of uncentered compound nouns reduplicative, coordinate, and appositive.

N.3.2.1.1 Reduplicative Compounds

Reduplicative compounds consist of repetition of a base noun, e.g. \$5587 /kmeen/*children* from \$558 /kmeen/*child.* A reduplicated compound is plural in meaning and often refers to the noun in a general sense, e.g.

SX755 MINE STEWY

sreysrey encen hasy

Women are like that. (SX /srey/ 'woman.')

N.3.2.1.2 Coordinate Compounds

Coordinate compounds consist of two or three base nouns. Normally this kind of compound refers to a class of objects or persons of which the components are members, e.g. 2975673/khao aav/ 'clothing' from \$27 /khao/ 'pants' and \$476 /aav/ 'shirt,' or \$5,558755 /tok tuu kaw?sy/ 'furniture' from \$5 /tok/ 'table,' \$5 /tuu/ 'cabinet,' \$57755 /kaw?sy/ 'chair.'

^{5.} These two terms are adapted from Huffman 1967.

N.3.2.1.3 Appositive Compounds

Appositive compounds are nouns whose first component is a title (including kinship terms) and whose second component is a name or other identifying noun, e.g. INTAGA/look kruu/ 'teacher' from INTA/look/ 'sir, mister' and A 'teacher' or EARE /boom kim/RE 'Kim' from EA /boom/ 'older sibling' and RE/kim/ a name of someone (who is called EA /boom/ because he is somewhat older than the speaker, with whom he is on intimate terms, or who is of inferior social status).

N.3.2.2 Centered Compounds

There are two types of centered compounds full centered compounds and pseudo-compounds. The components of <u>full centered compounds</u> occur alone as words; in the case of <u>pseudocompounds</u> one or both components may be <u>bound</u> (i.e. do not occur alone).

N.3.2.2.1 Full Centered Compounds

The heads of all full centered compounds are nouns, and the compounds themselves are nouns. The modifier portion of the compound may be:

- 1. a verb, e.g. USUIND /ptup keen/ 'bedroom' from USU /ptup/ 'room' and IND /keen/ 'to sleep.'
- 2. a noun, e.g. SSSSN /ptup tik/ bathroom' from USS/ptup/ 'room' and
- 3. a verb and object, e.g. vstffnss) /ptup tetuol phniew/ 'living room' from vst'/ptup/ 'room, 'sfns/tetuol/ 'to receive, 'and fs/)' /phniew/ 'guest.'

In most cases the head of the compound comes first, as in all the above examples. An example of a compound whose second part can be considered to be the head is INISM /daem chee/INI 'tree' from INIS /daem/ 'something long and thin, stem' and INIS /chee/ 'wood.' (An argument can also be made that INIS /daem/ is the head of the compound and not INIS /chee/.)

In many cases where both elements of the compound are borrowed from Sanskrit or Pali, the

^{6.} Term from Huffman 1967 p. 120

head comes second, e.g. \$\text{Normal} \text{Phiasaa-viccia/ 'the study of language' from \$\text{Normal} \text{Phiasaa/ 'language' and \$\text{Pi} \text{Priccia/ 'study, knowledge.' The most common nouns serving as heads of full centered compounds are the following (arranged according to Cambodian alphabetic order). They are all productive.

- 1. NE /kam/ 'action,' e.g. NEST /kam-vithii/ 'program' from NE /vithii/ 'occasion, ceremony.'
- 2. Rys /kaa/ 'matter, work' useds
 - a. with verbs, e.g. \$\mathrm{N} \sigma\mathrm{N} \sigma\m
 - b. with nouns, e.g. \$\text{Not} \frac{1}{2} \text{Ros} / \text{kaa-rottekaa} \text{'government work' from } \frac{1}{2} \text{Ros} / \text{rottekaa} / \text{'civil service.'}
- 3. Ru /kec/ 'matter, affair; 'e.g. Runs/kec-kaa/ 'matter, business' from Mis /kaa/ 'work, matter.'
- 5.25 M/krien/ 'tool, part, component,' e.g. 25 MENTS /krien-masin/
- 6. Signs /domnae/ 'gait; process; trip,' e.g. Signs strip /domnae-roo?-sii/ 'process of earning a living' from strip /roo?-sii/ 'to earn a living.'
- 7. Eg /thnay/ 'day,' e.g. Eg s sof /thnay-bon/ 'holiday' from y sof /bon/
 'holiday, ritual.'
- 8. Fr /tik/ 'liquid, water,' e.g. Fr ff / tik-krouc/ 'orange juice' from fr / krouc/ 'citrus, orange.'
- 9. F /tii/ 'place,' e.g. Find /tii-kron/ 'city' from Find /kron/ 'city, town' or Find /tii-koorup/ 'object of respect' from find /koorup/ 'to respect.'
- 10. USU /bontup, ptup, ktup/ 'room, 'e.g. USUSBN /bontup-deek/ 'bed-room' from SBN /deek/ 'to sleep.'
- ll. ໂຮລີວຣ໌ /prodap/ 'tool, equipment,' e.g. ໂຮລີວຣ໌ເລື່ອ/prodap-phleen/
 'musical instrument' from ໂລ້ລ໌ /phleen/ 'music.'

12. \$\mathcal{G}\$: /phteh/ 'house, place of -,' e.g. \$\mathcal{G}\$: \mathcal{G}\$: \text{phteh-lu?-} beay/ 'restaurant' from \text{\$\mathcal{G}\$}'/\lu?/ 'to sell' and \text{\$\mathcal{G}\$\text{\$\mathcal{G}\$}\$ / beay/ 'cooked rice; a meal.'

13. നെറ്റ് /póa/ 'color,' e.g. നെറ്റ് സ്ക്കാല് /póa-swaay/ 'purple' from സ്വാല് /swaay/ 'purple.'

14. 37767 /phiap/ 'state,' e.g. 37767 CUSE/phiap-yun/ 'moving picture' from CUSE /yun/ 'machine, engine, vehicle.'

15. 255 /mee/

a. 'female,' e.g. ESS /mee-koo/ 'cow (opposed to a bull)' from /koo/ 'cow. ox.'

b. 'leader, chief' e.g. 2587UNR /mee-tehian/ 'officer (military)'
from 87UNR /tehian/ 'soldier; military.'

16. syn /mcah/ 'owner, master,' e.g. syn is /mcah-pht6h/ 'landlord, host' from is /pht6h/ 'house.'

17. Ind /roon/ 'large building for a specific function,' e.g. Ind The /roon-ca?/ 'factory' from The /ca?/ 'wheel.'

18.25 /latti?/ 'philosophical system,' e.g. 2582 & Cos /latti?-sankumniyum/ 'socialism' from & & Sankumniyum/ 'socialist.'

19. Fin /wiccia/ 'knowledge, study of,' e.g. Fin ff/wiccia-peet/

'(study of) medicine' from *** /pest/ 'medicine, doctor, hospital.'

/vithii, pithii/ 'occasion, event, ceremony,' e.g. / vithi-bampé?-sa?/ 'promotion ceremony' from Erenn' /bampé?/ 'to put on (trans.)' and & /sa?/ 'rank.'

21. And 'sac' 'meat, flesh' e.g. And And sac-koo' 'beef' from And koo' 'cow, ox.'

22. Roon /saalaa/ 'school, hall,' e.g. Roons) /saalaa-rien/ 'school' from ss/ /rien/ 'to study.'

23. 28 5 /sec-kdey/ 'matter, affair,' e.g. 28 5 7 7 2 /sec-kdey-slap/ 'death' from 20 2 /slap/ 'to die.'

24. \$\frac{1}{278}, 278 /sthaan, thaan/ 'place,' e.g. \$\frac{1}{278} \frac{1}{278} /sthaan-tuut/ 'embassy' from \$\frac{1}{28} /tuut/ 'diplomat, diplomatic.'

25. sen /n6?/ 'person, human being,' e.g. sensessors; so /n6?-neesaat-trey/ 'fisherman' from \$8807 F /neesaat/ 'to fish' and so /trey/ 'fish,' or sensessors /n6?-rottekaa/ 'civil servant' from senses /rottekaa/ 'government, civil service.'

The following are common heads of full centered compounds which have variants used only in compounds and never alone. The transcriptions of the bound variants follow those of the independent ones.

- 1. ? f /put, putte-/ 'Buddha, 'e.g. * parts /putte-sahehaa/ 'Buddhism' from \$178687 /sahsnaa/ 'religion.'
- 2. so so /pil, pille-/ 'the people (force),' e.g. sos pillerot/
 'citizenry' from so /rot/ 'state.'
- 3. 55 /phuum, phuumi-/ 'place, region, 'e.g. 55875 /phuumi-phia?/
 'region' from 575 /phia?/ 'part.'
- 4. CUR /yún, yúnte/ 'motor, engine,' e.g. CURSUM: /yún-hah/
 'airplane' from SUN: /hah/ 'to fly.'
- 5. CS7 & /yian, yiane/ 'vehicle,' e.g. CS7 & ZJR /yiane-thaan/ 'garage' from ZJR /thaan/ 'place.'
- 6. C. /yut, yutte/ 'fighting, struggle,' e.g. C. /yutte-cun/ 'fighter' from RB /cun/ 'person.'
- 7. cc, 3 /yuv67, yuve/ 'youth, young person,' e.g. cc, 3 /yuwe-cun/ 'youth' from \$\$\mathcal{L}\math
- 8. 5 /rot, rotte/ 'state,' e.g. 5 ms /rotte-kaa/ 'government, civil service' from ms /kaa/ 'word, affair.'
- 10. \mathcal{NR} /ack, ackke/ 'one, single, highest,' e.g. \mathcal{NRR} /ackke-cun/
 'private (public)' from \mathcal{RR} /cun/ 'person.'

N. 3.2.2.2 Pseudocompounds

There are two main types of pseudocompounds

- 1. Those in which both components have meaning.
- 2. Those in which only the head has a meaning and the other component is a word-like sequence of syllables with no meaning outside of its role in the compound.

N.3.2.2.2.1 Pseudocompounds with Two Meaningful Components

The following common bound components occur at the beginning of a compound. In no case is any of the following bound components head of the compound.

l. ເປັນ / procia - / 'people, popular, 'e.g. ເປັນ ໄດ້ສີ / procia - ciat / 'nation, nationality' from ມີ ກີສີ / ciat / 'nation.'

2. SEN /mohaa-/ 'great, large,' SEN NESS /moha-semot/ 'ocean' from NESS /semot/ 'sea.'

3. NEO: /saha?-/ 'united,' e.g. NEO A /saha?-rot/ 'united states' from A /rot/ 'state.'

4. \$\$\$ /akke'/ 'high, important,' e.g. \$\$\$\$\$\$ /akke'-rotte-tuut/

'ambassador plenipotentiary' from A f 8 /rottetuut/ 'ambassador.'

5. 35 8 /amu?-/ 'under, lesser,' e.g. 35 8 7 7 15 /amu?-vityialay/

'junior high school' from from from / vityialay/ 'secondary school.'

5.985 /utdom, udom/ 'high, noble,' e.g. 9852 /udomethaan/ 'superior class' from 278 /thaan/ 'place.'

The following common bound components occur at the end of the compound. These components are all head of the compound in which they occur.

- 1. Gf /-coo/ 'to go; travel,' e.g. \$\$\$\$Gf /tehse-coo/ 'tourist' from \$\$\$\$/teeh/ 'place.'
- 2. TIN /-coo/ 'traveling,' e.g. IFNTIN /tehse-coo/ 'tourism' from IFN /teeh/ 'place.'
- 3. Leve /-niyum/ '-ism' e.g. Näuskuus /sonkum-niyum/ 'socialism' from Näus /sonkum/ 'society.'

4.אזין אַ /-sah/ 'study of' e.g. אוֹרְאָרָאָרָן /viccia-sah/ 'science' from איני /viccia/ 'knowledge.'

5. sander /-alay/ 'place,' e.g. sander /vityialay/ 'secondary school' from sandy vityia, viccia/ 'knowledge.'

N. 3.2.2.2.2 Pseudocompounds with One Meaningful Component

Normally pseudocompounds of this sort are formed with the meaningful element (the head) initial. There are two types of compound of this sort:

- 1. Those which involve a partial reduplication of the first element, e.g.

 TYPE /kbaal-kboun/ 'head' from **TYPE** /kbaal/ 'head.'
- 2. Those in which the components bear no formal resemblance to each other, e.g. final /pra?-kah/ 'money' from final /pra?/'silver, money.'

Reduplicative compounds are of three major types.

- 1. Rhyming compounds, e.g. $\mathcal{BRM}^{\mathcal{R}}$ /caan-kbaan/ 'crockery, chinaware' from \mathcal{BR} /caan/ 'dish, bowl.'
- 2. Alliterative compounds, e.g. [Start Start | prodap-prodat | equipment* from [Start | prodap | *tool.*
- 3. Ablauting compounds, in which only the vowel changes, e.g. 2727 /kmeen-kmaan/ 'children' from 2778 /kmeen/ 'child.'

^{7.} TTAS /kbaan/ is an obsolete form of no meaning to most present-day Cambodians.

VERBALS

V.1 Introduction

Cambodian verbs, like Cambodian nouns, are not inflected, in contrast with verbs of European languages. That is, the form of the verb remains the same no matter what syntactic environment it occurs in. Needless to say, there is no agreement with the person or number of the subject, and verbal categories like tense, aspect, voice are expressed paraphrastically when they are expressed at all. A verb like \$FY / the / "go" can be "went, goes, is going, will go, have gone, had gone, etc." depending on the other words with which it is used (e.g. adverbs, auxiliaries) or on its context (e.g. talking about future plans).

Categories of tense (past, present, and future) and of aspect (perfective, imperfective, etc.) are expressed by preverbal auxiliaries, e.g. FRN /dasl/ '(have) ever,' and by adverbials, e.g. FRN /hasy/ 'already.' These categories also appear in resultative verbs, e.g. FRNS /rien cop/ 'to finish studying' (cf. S.2.2.3.1).

Some modal categories, e.g. desire, obligation, ability, appear in preverbal auxiliaries, e.g. & /con/ 'to want' or in resultative verbs, e.g. & /baan/ 'can' in & / 10 & /thee baan/ 'can do (it).'

There is no subjunctive in Cambodian; situations like contrary-to-fact are signaled by context. For instance, the English sentence 'If he had known, he wouldn't have come' is translated into Cambodian as SUANTALEMENTS /bae kot den kot min moo tee/.

This Cambodian sentence can also be translated 'If he knows, he won't come' or 'If he knew, he didn't come.' There is no overt signal at all in this sentence for a contrary-to-fact situation.

Transitivity and voice in Cambodian are complicated. There is no inflection for voice (active and passive), and in many cases a given verb may be translated either by an active or a passive verb in English, e.g.

รุกละเการะธิรถามกก? laan look thee new asnaa 2007 72 75 75 8587 2007 ?

look thee laan niw asnaa

Where did you fix (make) your car?

Where was your car made/fixed?

Verbs of this sort are normally 'active' in meaning with an animate subject (2017) /look/) and passive in meaning with an inanimate subject (/laan/).

or

In casual, spoken usage there are even ambiguous sentences (with a limited set of verbs) like answer of the chased (someone) yesterday. However, such a sentence with a passive meaning would ordinarily be inadmissible in formal style.

In fact we can say that there is no passive construction in Cambodian, though there are devices which can be used to translate passives in other languages. Usually Cambodian prefers a simple active sentence, perhaps with an indefinite subject ? kee/ 'they;' however, especially in formal usage, an English passive can be translated using the verb 'traw' 'to experience something, to undergo.' The resulting sentence is an active sentence; what follows 's modifies 's in this case is not an auxiliary but the main verb. For example, 's something to what me, 'Much more rarely \$7.8 /baan/ 'get' is used like 'I had an experience, namely, they shot me, 'Much more rarely \$7.8 /baan/ 'get' is used like

From significations constrained wis base rottekas cuoy soy the rien khasen seethekec

He was helped by the government to go study economics.

A topic closely related to voice is causative action, in which one person permits or influences another to perform an action. Cambodian has a number of devices for expressing causative action, one of the most common of which is the verb \(\frac{207}{207} \) acy/ 'give,' which when used in construction with another verb means 'permit, cause to' e.g.

รู้ ริยาภาษิณฑาริเพธาร: ฯ

khnom aoy via meel kasast nih

I let him read this newspaper (or I had him read this newspaper.).

Another device is affixation, in which a root verb (cf. V.3 below) occurs with the prefix by /bon/, e.g. 25288 /bonkast/ 'to originate' from \$858 /kast/ 'to be born, to develop.'

Verbs which describe services are usually ambiguous; either they are active or they are causative. For example, one of the examples in the discussion of the passive that was given above;

รณาพรธิฐาลรลงบุณา

look thee laan niw asnaa

'Where did you fix your car?' can also mean, 'Where did you have your car fixed?'

స్ట్రీస్స్ స్ట్రీస్స్ khnom tiw kat so? / is either, 'I'll go cut my hair,' or, 'I'll go have my hair cut.'

You will see as you learn Cambodian that few of the other verbal categories are exactly like those of English in meaning either. Even where they seem to be alike, they will not always be used under the same circumstances. For instance pA /baan/ used before a verb means something very much like English past tense, that is, action completed before the utterance or before a specific reference point, e.g.

Karen kanlan yeen baan ban tew vin

Our forces shot back.

However, this use of \$7.8 is far more common in literary language than spoken and would be used in spoken discourse primarily to clarify an ambiguous situation and in some circles might scarcely be used at all.

V.2 Types of Verbal

There are three types of verbal in Cambodians auxiliaries, stative verbs ('adjectives') and action verbs.

V.2.1 Auxiliaries

There is a small set of auxiliaries which express tense/aspect categories and another, larger set whose members have modal meanings. Some of them may be followed by the syllable \$\int_{\mathcal{B}}^{\sigma} / \ta\epsilon \text{with no change in meaning, in which case they are written below with \$\int_{\mathcal{B}}^{\sigma}\$ following in parentheses, e.g. \$\int_{\mathcal{B}}^{\sigma\epsilon\int_{\mathcal{B}}}\$ /n\delta\epsilon(\ta\epsilon)^*\still.*

V.2.1.1 Tense/Aspect Auxiliaries

Tense/aspect auxiliaries can be grouped according to three criteria; aspect, duration, and *reality.*

There are three aspectual categories: completed action, begun but not completed action; and unbegun action. In addition, an auxiliary may be marked as durative; that is, it is either repeated or overlaps in time with some other action, as is the case in 'I am eating,' in which the act of eating overlaps in time with the act of speaking.

Completed Action

Unmarked: 278 /baan/'past action'

| dael/'within the subject's previous experience; translates

<u>Durative</u>: D'/thlop/'within the subject's previous experience,' usually refers to an act done more than once; sometimes translates 'used to.'

Scree/niyum/'frequent practice'

Begun Action

Unmarked: \$\$\forall (\frac{1}{15}) \/n\frac{1}{16} (\frac{1}{1

Unbegun Action

Ummarked & / nin/'will' (predicted action in the future)

ESSOS /minton/'not yet' (unbegun but anticipated as strong possibility).

Durative: No forms

In addition, some auxiliaries specifically mark the event in a clause as real, that is, it actually has happened and is not a possibility or even a prediction. The auxiliaries which carry this meaning are

^{1.} The word 'completed' here means only that the act is no longer going on, not that all the work has been done to completion.

and one idiom & /mian/plus clause, e.g.

STREET STEETS STEETS /mian kee lu? mehoup new nih tee?/
(Is it a fact that) they sell food here?

None of these 'reality markers' is used in the future. This means that to say 'don't ever say that' you cannot use the word \$\frac{2}{\text{N}}\Omega / \dash / \end{as} / \end{as} \text{Vever}. Instead you will have to translate this sentence another way, e.g.

non't ever say that! (literally 'don't say that at all!).

Likewise Funt /dasl/ cannot be used in a sentence like 'I'll never do that again.'

V.2.1.2 Modal Auxiliaries

There are many verbs used before another verb with modal meaning, but there is only a small class of verbs the members of which occur only as auxiliaries. These are

- a. As (Es)/kuo(tas)/should
- b. /5/288)/trew(tae)/'must'
- c. An E/aac/can, (is) able
- d. \$\$\$\$\$\$ /min bac/ 'don't need to' (\$\$\$\$\$\$ /min tres/ means 'must not').
- e. By /con/'to want to' (NaB: 'to want' + noun is always By DE /con baan/ + noun, literally 'to want to get' + noun.

Other verbs which occur in preverbal position are considered full verbs which are in an attributive construction with the main verb, e.g.

รณาหารรูริการษก /look trew kaa mob/

You need to come

in which forms /trew kas/'need' is not considered a modal auxiliary since it also occurs as a main verb in a sentence like

ំគ្នាន ត្រូវការលុយទេ។

/knnom min trew kas luy tee/ I don't need money.

V.2.2 Adjectives (Stative Verbs)

In English adjectives are classed as nominals; however, in Cambodian they are verbals. They occur in the same syntactic positions as action verbs. This means that you cannot translate English 'is/are' before a predicate adjective. For instance, the English sentence 'my friend is fat' is translated "" " " " " " " " " " puo' ma' khnom thot/ and the word \$\infty \textstyre{\infty} \textstyre{\

Adjectives are used with verbal auxiliaries just as action verbs are, e.g.

នាន់ក្រដូវត្សិត។ /kốt trew pukas/

He ought to be skillful.

However, they do not occur in construction with resultative verbs (cf. 3.2.2.3.1) like $\mathfrak{St}'/\mathfrak{cop}/\mathfrak{to}$ complete.

Henceforth, unless otherwise specified, the term 'verb' is used to refer to both adjectives and action verbs.

V.3 Composition of Verbs

Like nouns, verbs are categorized as root verbs (only one component), complex verbs (containing an affix), and compound verbs (containing two or more independent words).

V.3.1 Root Verbs

Root verbs are both native, e.g. 253 /kaet/'to be born, arise' and borrowed, e.g. 2527 /boucia/'to cremate' (from Sanskrit). Most native root verbs are monosyllabic, e.g. 250 /coul/'to enter.'

V.3.2 Complex Verbs

Complex verbs are formed by prefixation and infixation. As was the case with complex nouns (cf. N.3.1), the affixes are not productive, though some are very widespread.

Below are listed some of the most common affixes occurring in complex neurons.

V.3.2.1 Prefixes

- 1. /p-/ 'causative,' e.g. 2 / /pden/'to report (cause to know)' from 2 / /den/
 'know' or 2 / /phdom/'to gather together (cause to form a lump)' from 3 / 'dom/
 'a piece, lump.'
- 2. /k-/ *change of meaning from base, * e.g. \$\sigma_5\sigma_5\sigma_1'\ \text{kbot/*to betray* from /bot/*to turn, to fold.*
- 3. /Co-/ or /Co-/ where C is the same as the first consonant of the root verb, e.g. Now /kokaay/*to scratch, dig at (repeatedly)* from now /kaay/*to dig.* In this case C is /k/. Normally Co-/Co- indicates repetitive or intensive action.
- 4. /ro-/ a. 'forms adjectives,' e.g. sas /rolut/ 'extinguished' from

 as /lut/'to extinguish, put out.'
 - b. 'intransitivity,' e.g. for a /roliey/'to melt, thaw (intrans.),' from an a /liey/'to mix.'
- 5. /pro-/ a. 'reciprocity,' e.g. ([558) /procam/'to wait for one another' from 20 / cam/'to wait.'
 - b. 'causative,' e.g. prodouc/'to compare (cause to be similar) from prodouc/'like, similar to.'
 - c. 'change of meaning from base,' e.g. [DANS'/prokan/'to maintaing to discriminate' from NS'/kan/'to hold.'
- 6. /cro-/ 'causative,' e.g. pr /cromuc/'to submerge (trans.)' from pr /muc/'to dive, go under.'
- 7. /kro-/ change of meaning from root verb, e.g. (FF) & /krovot/eto jerk

 (in any direction) from } & /vot/eto jerk (over the shoulder).
- 8. /bon-/,/pun-/ 'causative,' e.g. εξερίλ / bonrien/'to teach' from ερλ /rien/'to study, to learn;' κη π΄ /punriik/'to expand, to build up (trans.)' from κ΄ /riik/'to expand (intrans.), to bloom.' Note that the /η/ at the end of this prefix can be replaced by some other nasal consonant following the rules in N.3.1.1 prefix 1. This is one of the most common prefixes.

- 9. /don/ 'changes the meaning of the base,' e.g. Single /dondaem/'to quarrel over ownership' from She /daem/'origin.'
- 10. /rum/ 'changes the meaning of the base,' e.g. fares /rumliey/'to melt (transitive)' from an ex/liey/'to mix.'

V.3.2.2 Infixes

- 1. /-m-/ 'verbalization' IN /lmeeh/'to exceed; to violate' from /leeh/ 'beyond.'
- 2. /-on-/a. 'causative,' e.g. sign /bon?ael/'to frighten' from signs /ph?ael/'afraid.'

 b. 'forms adjectives,' e.g. 25 d /domboun/'first' from

/-on-/ follows the promunciation rules given in N.3.1.1 prefix 1.

3. /-om-/ a. 'causative,' e.g. NEAS /som?aat/'to clean up' from

ANS /s?aat/*clean.*

/tboun/'head (archaic).'

- b. 'change of meaning from base,' e.g. of she /camloon/'to copy' from & /cloon/'to cross.'
- 4. /-amn-/ 'change of meaning from base,' e.g. $\mathcal{R}\Omega\Omega$ /kamnot/'to require' from $\mathcal{R}\Omega$ /kot/'to take notes.'

V.3.3 Compound Verbs

Compounding is considerably less extensive for verbs than for nouns. There are uncentered and centered verbal compounds (cf. N.3.2).

V.3.3.1 Uncentered Compounds

V.3.3.2 Centered Compounds

There are also two types of centered compound verb. The first kind is a combination of verb and noun, e.g. **sspan*/20-kun/**thank you* from **sss*/20/*happy, pleased**and **pan** *merit, moral credit.* The second kind involves some form of partial reduplication of a meaningful head by rhyming or alliteration, e.g. **span** /sruol buol/**comfortable** from **span** /sruol/*easy** and the rhyming component **pan** /buol/, which has no independent meaning. Most members of the partially reduplicating class are adjectives.

ADVERBIALS

A.1 <u>Introduction</u>

Cambodian adverbials are members of the following classes:

- 1. Negators
- 2. Preverbals
- 3. Particles
- 4. Ordinary Adverbs

In addition, there are three words which combine with adjectives to form adverbial phrases.

A.2 Negators

The word for 'no' in answer to a question is SF /tee/. In polite speech it is preceded by a response particle FF /baat/(used by males) or FF /cah/(used by females), e.g.

Q. SANY PRINTER?

Look srey den tee?

Do you know, (Madame)?

No (I don't).

There are three preverbal negators, of /pum/, DR /min, m/, and send /ot/(RR /ot/ is also used for send). of /pum/ is the most literary and seldom heard in speech; DR /min/ is used in speaking, but in Phnom Penh it is used usually in fairly formal contexts. send (RR) /ot/ is the usual negator used in speaking in Phnom Penh. All of these precede the word they negate.

If a nominal is preceded by a negator, the construction is negator + FFR /meen/
+ noun, e.g. FRIERSIE /min meen kinom tee/'It's not me.' ?) /cia/'is'/ is also
negated by FRIES /min meen/, e.g. FRIERENDIES /nih min meen cia
sac koo/'This isn't beef.' When R /kii'is' is negated, it is also replaced by
FRIES /min meen/, e.g. FRIERENDIES /nih min meen sok, suon,
nin sos tee/'This isn't Sok, Suon, and Sos.' The negators + FFR/meen/ are also used to mean
'it is not the case that...', e.g. FRIERENTENDIES /khnom of meen that encen
tee/. 'It is not the case that I said that.'

Ordinarily, if a negator precedes a verb phrase, the verb phrase is followed by \$\$\int \frac{1}{2}\$ (tee/, e.g.

A stronger statement is made by substituting & AST: /sch/'at all' for & & /tee/, e.g.

ะเหเนนน์ลลย์

/knñom m±n dən sah/

I don't have any idea; I don't know at all.

If there is an indirect question, for may follow either the negated verb or the indirect question, e.g.

್ರಿಕೆಜಿಸಿಸಿಕ್, ಸಾರ್ಪ್ಯಸ್ನು /knnom min den tee, kôt niw asnaa/

or

లైలెజ్జీజ్ఞన్క్ కెనెబ్లున్క్ శ /knnom min dan, kot niw agnas tee/

both of which mean 'I don't know where he is.'

The verb \$30.5 /mian/'there is; to have has a special negative form \$30.5 /kmian/'there is not; to not have, e.g.

್ರಿಸ್ಪಾರ್ಡ್ y /khnom kmian luy tee/ I haven't any money.

Where \$7\$ /mian/ is used as an auxiliary (cf. V.2.1.1), \$7\$ may also be used, e.g.

massansyvisy of the tell food there.

In spoken usage, \$78 /kmian/ is also used like the general negators, e.g.

หลานนี้สเหลื

/khnom kmian den tee/

I don't know.

also means 'without', translating both the English preposition and conjunction, e.g.

्रश्नेक्ष्रकारिक स्थाप्त कार्य

/khñom tiw kmian hep gyvan tee/

I went without baggage.

ME'/ot/ is used in the same way, e.g.

*ลู้รศิร*ศรย์ญหลีให้รรฯ

/khñom tiw ot hep syvan tee/

I went without baggage.

In a negative imperative, the negator is $\int_{1}^{\infty} /kom/!don!t!$, e.g.

ည်းမှုတာလေးမည့်နေ

/kom niyiey əncən/

Don't talk like that, don't say that.

The expression 'don't ever' is usually translated ?... Gentham...aoy soh/, e.g.

หุ้น อายาย เล่ากุ้น อยารพา: +

/kom niyiey encen acy soh/

Don't ever say that!

(There are other ways to say 'don't ever' which you will learn as you study Cambodian further.) PRRF /min sew/ is a mild negative 'not very, not so', e.g.

*ฺลุ๋*ชิลพุริตุณชิฐภา*ธ*า่ง

/khnom min sew coulcet kot/

I don't like him very much.

A.3 Preverbals

There are two groups of preverbal adverbs 1) <u>fixed preverbals</u>, which occur only in preverbal position, and 2) <u>non-fixed preverbals</u>, which may also occur in other positions, e.g. preceding the subject of the sentence.

A.3.1 Fixed Preverbals

The common fixed preverbals are:

所名(部) /kan(tae)/'increasingly'

「所名(部) /krón(tae)/'only, just'

「古い(部) /cét/'slmost, nearly'

『子び(部) /teep(tae)(nén)/'to have just'

『子の(部) /rovil(tae)/'busily'

『子の(部) /rit(tae)/'only, just'

『子の(部)/riep(tae)/'to be about to, planning to'

『子の(部)/sen(tae)/'almost'

『子のでい(部)/aalay(tae)/'busy at'

An example:

ತ್ರೀಕೆಬ್ಟ್ರ್ /khnom təəp moo/

I have just arrived.

A.3.2 Non-fixed Preverbals

The common non-fixed preverbals are:

Sk(***)/kun(tas)/*certainly**

でいてお /compam(tas)/'usually'

までは、これ /craen(tas)/'mostly'

まないまか /tasn(tas)/'usually, always'

「おおいか)/prohasl(cia)/'perhaps, maybe'

いまいかか /muk(cia)/'certainly, probably'

いまいいまか /muk(tas)/'certainly, probably'

ままいいまか /romsen(tas)/'usually'

ままいい(まな)/srap(tas)/'usually'

ままいい(まな)/srap(tas)/'suddenly'

For example:

နှိုင္သားပါလာသာသည္ကေန /khnom prohaticia tim satk/

or

្រវិហល់សិក្សិវិស្វិក។ /prohael cia khñom tiw saek/ Maybe I'll go tomorrow.

A.4 Particles

There are four types of particles hesitation, response, medial, and final.

A.4.1 Hesitation Particles

The hesitation particles used in Cambodian are;

Hesitation is also shown in frequent repetition of the same word.

^{1.} Also used before a sentence.

Examples

தீக்க... சி. நிக்கவினு /khnom kit...ei...min kheen/'I can't think of anything.' தீக்க... சிக்கினு... கூறு கூறிக்கி /khnom rob...adeen...sambot kee/'I'm looking for, uh, their letter.'

ന്റ്... ള്റ്റ... ളായാട്ടണ്ണ് /kot...nae...niyiey encen/'That's...uh... what he said.

Before an utterance, Cambodians will attract the attention of the hearer with words like EM: /nsh/, EM /nas/, EEM /meeh/, or by using the hearer's name or his title, e.g.

in. Ens.: /nac! me nih/'Hey! Come here!'

sonr: Assis? /look! kit thee cy?/'Sir! What are you planning to do?'

familiar terms.

A.4.2 Response Particles

When a Cambodian answers a question or simply wishes to indicate that he has been listening, he uses one of the following response particles:

ms /baat/(polite, used by males)

(polite, used by females)

12 /ae/ or 3 /44/(intimate or used with social inferiors).

An affirmative response to a question may consist only of a response particle, or it may include a longer answer, e.g.

look den tee/
Do you know (it)?

A. Prof(2) 22)

/baat ((khnom) den)/
Yes (I do).

A polite negative response particle precedes the negative & /tee/'no' in polite speech (cf. A.2 above).

A.4.3 Medial Particles

There are two common medial particles in Cambodians $\tilde{\mathcal{F}}$ /koo/ and $\tilde{\mathcal{F}}$ /new/. Neither is translatable into English.

/koo/ is used before a clause or a verb phrase with something like the meaning of 'accordingly, then, so, and so.' In fact, its function is to introduce a predicate which is in some way related to what has come before. For example,

ក្នុនសិស្សញ្ជាក់សុរទៅត្រ ត្រូក៏ប្រាប់ទៅគេថា ហើយក្នុនសិស្សក៏ឈប់ សុទ្ធ។ /koun seh mené° suo tim kruu...kruu koo prap tim kee thaa...hasy kounseh koo chup suo/

A student asks the teacher...(and) the teacher tells him... and (so) the student stops asking.

The teacher's telling is a consequence of the student's question, and the student stops asking because of what the teacher told him. In another example we see that the subject of the verb phrase introduced by \Re need not change.

ក្នុងសិស្សាអ្នាក់យល់សំណុតក៏រដ្ឋយថាម /koun seh mené? yul sammuo koo chlaey thaa/

*One of the students understands the question and answers:

* as a verb phrase introducer is even clearer in the sentence-initial phrase * Kuis /koo pontae/'however,' e.g. * Ab , * Eise Ese Ese Ese Ese /khñom den koo pontae khñom min con tiw tee/'I know. However, I don't want to go.'

is also used in a great many other important structures and idioms, e.g. question word plus \(\text{Kins} \) /kso baan/, as in \(\text{Ning} \text{Ning} \text{Ning} \) /than sy koo baan/'(You) can do anything or \(\text{Ning} \text{Ning} \text{Ning} \text{Nanaa koo baan/'anywhere is 0.K.'} \) It can be analyzed as keeping its basic meaning in such constructions.

The other medial adverbial is \$\int_{y}^{2}\$ /new/, which occurs only in literary or highly formal spoken style. It marks an object of a verb or relator, almost always the direct object of a verb, especially when a temporal or locative phrase precedes the object, e.g.

TRANSISTRE REAL STREET OF LEAVE / kruu suo tew kounsel new sommuo ten laay/
The teacher asked the students the question.

A.4.4 Final Particles

There is a set of very important particles that is used at the end of a phrase, clause, or sentence. This set includes the following:

a. am M	/nah/	'very'
b. \$87	/t i w/	*go ahead and* (imperative); action away from the
		speaker; extended action
c. 👣 🕻	/coh/	go ahead and (it's O.K. with me)
d. <i>UK</i>	/mo6/	(action toward the speaker)
•.కబ్బడా	/haey/	*already*

EDES/hasy/ indicates action whose termination has an effect on the present; it translates English auxiliary 'have' as in

ခွံနမ်ာလည်နည့်နလြတ္ကမ

/khñom meel kon nin haey/

I've seen that movie (already).

It is close in meaning to 'already' in some non-standard immigrant English, e.g. 'That's right already,' which is translated almost literally into standard Cambodian profit wow /trew haey/'right!' In a negative sentence for the haey/ is replaced by for for /niw laey/ with a meaning of 'so far, ever'; e.g.

รู้ยนทล์เชิญหุนญี้ ประชาญา

/khnom min ton meel kon min niw lasy/ I haven't seen that movie (so far).

In a future context there is a use of southasy/ which indicates completion only in a remote sense, e.g. the second south in

รีญหลุ้งหังเทียง

/s?ask khnom thee hasy hasy/ tomorrow I do finish already I'll finish (it) tomorrow.

In this example the first since indicates completion of the act, but the

second connotes a promise to perform the action. What the second fines/haey/ makes of the sentence is 'tomorrow I'll finish it - and now it's no longer an issue for further discussion.'

f. 18 /tee/ 1) marks a yes/no question, e.g.

The particle is not obligatory, but it is much more often used than not.

2) occurs with a general negator (cf. A.2) in a negative sentence,

e.g.

jesidasey /khñom min den tee/ I don't know.

Again, it is not obligatory, but it is very frequent.

3) marks a statement which in some way is contradictory to what has come before, e.g.

A. รถรากระชายภาพ ฯ

/look tiw hasy/

You've gone already.

B. ระ อุ๊ะศรริญหระ ฯ

/tee khnom tiw stack tee/

No, I'm going tomorrow.

g. [/rii/ or [] /rii sy/ marks a question, often one for which an affirmative answer is anticipated (if the question is affirmative). A negative answer is anticipated if the question is negative, e.g.

គេកំពុង ទើញយប្ទ /kee kompun thee baay r±1/ Is he cooking?

(This question anticipates an answer 'yes.') Another example:

scan កាមិន ញាំប្រ ? /look min nem riti?/ Didn't you eat?

(This question expects an answer 'no.')

h. 3 m /viñ/'instead, back again,' e.g.

ลีรุรีญรอัรษาช (cylew suo khñom viñ/

Now ask me (back again, in return).

Another example:

#1505 \$1872, 150 001825 mg 4 /kom pres chnan muh, pres as nih viñ/
Don't use that pan, use this one (instead).

is also used in constructions like N... for /ae...viñ/'as for,' e.g. Nesson/ac khñom viñ/'as for me...' and in idioms like Rewsenfor/phtuy tw viñ/'on the contrary.'

i. Don / /naa/ or Don /ne/ serves as a deferent or softened exhortation.

Examples of Don / naa/:

**STETON ONT /kom tiw naa na/
Don't go anywhere.

Note that there is a higher than normal pitch on the entire sentence and a rise on $\alpha \vec{n}$.

j. \$5757 /peek/*too (much), very, exceedingly, e.g. \$555 \$55577 /craen peek/

k. N. /sen/'first, for the time being.'

1.885 /das/'also.'

m. B / /phoon/'also; will you?'

 $\mathcal{B}\mathcal{S}$ /das/ and $\mathcal{B}\mathcal{S}$ /phoon/ are both translated 'also.' However, in careful usage, $\mathcal{B}\mathcal{S}$ is used when A is doing something and B is doing it too, e.g.

សងុខសង្ទិះ ស្នេសាស្ទិសេសិះជ្រែវ។

/kốt thư phiến hay khnom thư phiến das/ He's going home, and I'm going home too.

RB, on the other hand, is used in two especially important places:

1) it is used when A is performing action X and action Y; that is, the same subject occurs with two or more different verb phrases, e.g.

geruben est bon hay the pheas phoon/

I'm going to the bank and to the market as well.

2) $\mathcal{B}_{\mathcal{B}}$ is also used when A and B are doing the same thing during the same period of time but B is a follower or a kind of junior partner, e.g.

r.જેરઅસ્પ્રેયક્ષેસ્ટર્

/khnom tiw phsaa sylew/

I'm going to the market now.

B. ब्रेडलप्रिमेक्सडड?

/khnom tiw phoon bean tee?/

Can I go too?

Note that \$23/das/ makes no restriction on the time span covered the way

\$25 /phoon/ does in usage number 2 above; \$25 does not specify when the second person

performs his similar action.

n. If it /lasy/'no longer (not)...any more; at all; will never, don't ever'
o. If /tiet/'no longer, (not)...any more; further, more'

A.5 Adverb Formers

The adverb-forming words are \hat{Z} ? /cia/, \hat{z} ? \hat{Z} ? \hat{Z} ? \hat{Z} /cs/daoy/, \hat{Z} /yaan/, and \hat{Z} /doo/. All are used with adjectives to make adverbial phrases, e.g. \hat{Z} ? \hat{Z} / \hat{Z} /mian phniew móo cia craen/'Guests came in large quantity.' The word \hat{Z} /doo/ is limited to literary style.

Following an imperative verb, 900/aoy/ also has adverbial meaning, e.g.

សុំវិមិសទុំយច្បាស់។ /som meel acy chah/

Please read clearly.

Another example:

kee thee soy chap/
They did it quickly.

Literally > cs + adjective means 'so that it will be...'

A.6 Ordinary Adverbs

Ordinary adverbs are formed by affixation and compounding. There are also a few root adverbs, e.g. Sept /eylew/'now.' For the most part, however, words translating English adverbs are adjectives. That is, they are verbs. They get the title of 'adverbs' because they can be used in syntactic positions like modifiers of verbs, e.g.

Tricklimation /kot moo chap nah/'He came very quickly.'** /chap/'quick, fast' is normally an adjective. The number of words used purely adverbially is very small.

A.6.1 Complex Adverbs

The only affix which forms adverbs is the reduplicating prefix /Co/ or /Co/ in which C is the first consonant of the base, e.g. e.g. e.g. /ñoño/'tremblingly, shakingly' from e.g. /ño/'to tremble, shiver.' In this case C is /ñ/, so the prefix is /ño/.

A. 6.2 Compound Adverbs

There is one type of uncentered compound adverbs that is, a compound composed of two independent words, e.g. SEFFICE /ruoc hasy/ from SE /ruoc/'to be finished' and FICES /hasy/'already; to be finished.' There is also one type of centered compound adverbs that is, a compound in which all elements are meaningful, e.g. NESTER:

//sop thnay nih/'nowadays, presently' from RES /sop/'every' RE /thnay/'day' and RE' /nih/'this.'

RELATORS

R-1 <u>Introduction</u>

There are two types of relators:

- 1. phrase relators, which connect words and phrases with each other and
- 2. clause relators, which connect clauses with each other.

R.2 Phrase relators

The two types of phrase relators are <u>copulas</u> and <u>prepositions</u>. Copulas connect two words or phrases, usually nominals, to make a clause; prepositions connect a following word, again usually a nominal or a noun phrase, to what precedes, but the result is not necessarily an independent unit.

R.2.1 Copulas

There are only three copulas. They are:

1. \Re /cia/, which is the most common copula. It may be interpreted as indicating that the subject is a member of the class of objects named by the predicate; that is, it says that the subject 'is a...' For instance,

ra: Nisgyrdy /nih cia kmaw-day/ This is a pencil.

It is negated by BRIBS /min meen/, e.g.

งระบัลรัยลนิวเอรี่ยระจร

/nih min meen cia kmaw day tee/ This isn't a pencil.

2. \Re /k±±/, which may be used with the same meaning as \Re /cia/ except that where it is followed by more than one proper name it is obligatory, e.g.

rest and ane thanks of /nih kii sok, suon, nin soh/
This is Sok, Suon, and Sos.

/k44/ also means 'that is, that is to say,' e.g.

ฐัยก็ดีเลยกทผงเลยิด สิธิเลง

/khnom mos? pii khas me?karaa dol khas miinaa, kii bay khas/
I'm coming from January to March, that is to say, three months.

20705 /pool k44/ also means 'that is to say.'

In some cases there is no copula at all, especially in predicates containing time words. For example

thnay nih thnay saw/
Today is Saturday.

R.2.2 Prepositions

There are only a few words that can be classed as prepositions in Cambodian, though there are other means of translating English prepositions. The prepositions are

/khoh tae/'except' (slang) * /kraw tae/'except' \$6 ST /cieh tae/'except' (slang) sor sorbia /leek leen tas/'except' 25 mess /kraoy (pii)/'after' /ruoc pii/'after'

/kraw pii/'aside from, besides' aride from besides, aside from සියයි /cian/*(more)than* Ringer /ciamuoy/'with' क्षेत्र /c±t/*near* L's /cumvin/'around' 18705555 /daoy saa/'because of' /pruh/'because of' Assem: /pii pruh/'because of' miss /tan pii/'since' क्रांट /ten/'including'

```
/proom ten/"including, as well as"

かかがか /tól taɛ/"until"

がいまない /rehout dol/"until"

/pht6l/"concerning, pertaining to"

/pii/"about, from"

/mpii/"about, from"

/mun (nin)/"before"

/reboh/"belonging to"

/rovian/"between, during"

/somrap/"for"

/smae/"equal to"

/aɛ/"at"
```

English prepositional phrases can also be translated by two types of Cambodian phrase which do not include prepositions:

1) a verb phrase which is attributive to what precedes, e.g.

in which the verb phrase Ross Nord of stack/until tomorrow includes the verb 'arrive at.'

Thus, literally this sentence is 'I'll work (in such a way as to) arrive at tomorrow.'

Verbs which are frequently used this way are:

ذ	/com/*to hit exactly, be on target*	'exactly at'
វីឆ្លល	/chvael/'to go around'	'around'
බාජ	/cop/'to adhere to'	'next to, adjacent to'
R K	/cuun/°to give (formal)°	for, to
Ban.	/aoy/°to give (informal)°	'for, to'
ân	/cuoh/*to replace*	'instead of'
กิ [*] ภูพ	/cumnuoh/*to replace*	'instead of'
BW.	/dol/°to reach, arrive at°	*until*
8857	/tumr6m/°to endure°	*until*
ŖG	/douc/*to be alike, similar*	'like'

<i>කු</i> ෂඪා	/douccia/*to be similar to; seemingly*	'like'
វាម	/taam/*to follow*	'according to, following'
₽W′	/tfl/'to support face to face'	'facing'
8.89	/niw/'to be located at'	'at'
ಆಶ್ಚರ	/bontop/*to be next*	*next to, succeeding*
ะญห	/leeh/*to exceed*	'more than, exceeding'
33	/vun/'to go around, encircle'	*around*
ల్గమ	/huoh/*to pass*	more than

> නෙ<u>න්නූ</u>දී /kốt knon phiếh/

He's in the house.

òr

នាន់ខេត្តជានិង

/kốt niw knon phiếh/

with the same meaning. The locative nominals are:

หญาณ	/kondaal/'middle' a	s a prepositions	in the middle, between
<u>r</u> d	/knon/*interior*		'inside'
क्रुप्र इक्ट्राइ	/kbas/*area next to*		'next to'
श्वात्र	/kraom/*bottom*		'under'
इंटिया का	/kracy/*back part*		'behind'
इह्ह्म	/kraw/*outside*		outside of
sw p	/chween/'the left side'		'to the left of'
८ इ.३	/muk/'face, front'		in front of
รณ์	/lee/'top'		on top of, over
_ຄ າ	/sdam/*the right side*		*to the right of*

These nouns are frequently used as part of a compound containing 27% /khaan/e.g. 27% /khaan kraom/'the under part' (except 27% /kbas/'next to,'

which is seldom used with 27B /khaan/). However, they may also be used alone as nominals in some circumstances. A sentence like

He's in the house.1

is therefore treated as a transform of a base sentence like

/kot niw knon phtch/

He's in the house.

in which \$87 /niw/'to be at' is deleted.

R.3 Clause Relators

There are two types of clause relators, fixed and non-fixed.

R.3.1 Fixed Clause Relators

A clause which contains a <u>fixed clause relator</u> can occur in only one position relative to the clause to which it is connected, for instance in

త్రికత్సునతత్రికంగా /khñom meel ruoc khñom tiw/

I'll read, then I'll go,

the clause containing the fixed clause relator \mathcal{F} /rucc/'then' can occur only after the clause to which it is connected. Most of the words in this class correspond to coordinating conjunctions in English, and many can be used to connect nominals, e.g.

TENTIME

/ceek rit svaay / bananas or mangoes.' Relators of this second type are marked by a following symbol (N) below. The members of the class of fixed clause relators are:

Kurs /koo pontas/'but, however'

^{1.} A more frequent meaning of this first sentence is 'the one in the house,' used of someone who is respected.

```
/ponta E/*but*
             /k\frac{1}{2}/*that is* (N)
            /k++ thaa/'that is' (N)
200
       /douc thas/'that is' (N)
rmors
            /pool kii/that is' (N)
2822

R.3.2 Non-fixed Clause Relators

The clause in which a <u>non-fixed clause relator</u> occurs may occur either before or after the clause to which it is connected, e.g.

နဗိုန္ဓာမာန္ကလူေပး နည္ခနက္ခန္ဌာန

/baə kee mian luy, kee tin laan/
If they have the money, they will buy a car,

or

နောင်ကျွန်ကုန်းမြီးနာမာနည်းပ

/kee tin laan bae kee mian luy/

They will buy a car if they have the money.

R.3.2.1 Temporal Clause Relators

Clause relators which indicate time relations are:

1) Used in past, present, and future contexts

mass /knon peel/'when; while' smarshar /peel dael/'when; while' Spress /kraoy(pii)/'after' ruoc pii/'after'

/dol/*when* 205

Ansimos Pay dol peel dael ! when!

** /niw peel/'when' /luh/'when'

/tan pii/*since*

/peel naa/'when, whenever'

un(nin)/'before'

2) Used in a past context only:

mas /kaal/'when (past)'

ക്കുന് /kaal pii/*when (past)*

3) Used in a non-past context only:

/kaal naa/'when, whenever' masam

momse /kaal naa bae/ when, whenever

(bas kaal naa/ when, whenever

4) Used only in a future context:

/tumrom/'when (future)' E'M

smiles /tumrom dol/when (future)

R.3.2.2 Non-Temporal Clause Relators

မွန်တာ့ဆ မွန်တ

/kom soy/*in order that not, so that not*

/kom aoy tas/'so long as not, provided that not, on the condition that not.' e.g.

ब्रेश्म प्रदेश का है का है कि है।

/khñom tiw kom aoy tas via tiw/

I'll go only if he doesn't.

/kram/'lest, for fear that'

/kraw pii/'aside from the fact that'

/khlaac/'lest, for fear that'

cummuch/'instead of the fact that'

AG(B) /douc(cia)/'as if'

[/daambay/'in order that'

/daembay soy/'so that, in order that!

sances /daoy/egiven the fact thate

/daoy saa/'because of the fact that'

fifs (is) /dbet(tae)/because; although

ອາຄາເຮືອ /tol tae/'until'

/tumrom/'until; only if, provided that

masis /ton tae...kom ey/"if it were not for the fact that....

VOCABULARY AND USAGE

U.1 <u>Introduction</u>

One of the biggest problems you will meet in your study of Cambodian is the fact that in many cases there will not be a one-to-one fit between Cambodian and English words. This is for two major reasons.

other; even as basic a factor as geography is widely different. English is spoken largely in temperate-climate countries; Cambodians live in a tropical land. Western technologies, philosophies, historical experiences, and religions are very different from those of Southeast Asia. Take food, for example. To a middle-class American, a meal consists usually of meat and vegetable, accompanied by some sort of carbohydrate, and perhaps dessert. To a Cambodian, especially a less affluent one, a meal is rice, generally accompanied by a much smaller amount of meat and vegetables than an American considers essential. This difference is reflected in the Cambodian word that comes closest to the English word 'meal': \$\text{PCS}/\text{baay/literally 'cooked rice.'} In English we cook food; in Cambodian a housewife must \$\text{ENGS}/\text{baay/literally 'cooked rice.'} is several times a day.

The second reason is the fact that people from various linguistic backgrounds slice up their perceived environment in different ways. That is, to a Cambodian, for example, a nuclear family consists of one's parents and one's older and younger siblings; to an American, on the other hand, the nuclear family is one's parents and one's male and female siblings—at least as far as the respective languages are concerned.

English words for 'sibling'

Cambodian words for 'sibling'

brother

boon/'older sibling'

sister

p?oun/'younger sibling'

In English the age distinction and in Cambodian the sex distinction can be expressed by adding an attributive word, e.g. 'older' in the English 'older brother' or sex /srey/'female' in the Cambodian & /som srey/'older sister.'

A more extreme example of the difference in emphasis expressed in the kinds of distinctions made in the vocabulary of the two languages is the word 'cut.' In English there is one word 'cut' that can be used to cover many situations, all of which are so different to a Cambodian speaker that not only can he use a different word for

each situation, he must do so. Some of the Cambodian words for 'cut' are

ms'	/kat/	to cut with seissors, to cut in two
em s'	/han/	to slice
às.	/mut/	to cut oneself
ಶಾಲ್	/kap/	to chop (e.g. wood), to hack
2 \$\) \s		to trim all around
િજ	/crep/	to trim in spots
Sa se	/crout/	to cut grain in order to harvest
gluss	/cəñcram/	to chop up, to dice

To be sure, English has variants on 'cut' that correspond to some of these Cambodian words. However, 'cut' can be used in all cases to cover the basic idea; in Cambodian there is no single word.

This kind of thing happens the other way too. In Cambodian [5] & /rien/ means both 'study' and 'learn.' For you to distinguish between the two meanings to which you are accustomed when you speak Cambodian, you will have to either rely on context to clarify your meaning or will have to add additional words, e.g. [3] SINT rien ceh/'to learn,' literally 'to study (and) know.'

This all means that not only will you have to learn structural patterns and words, but you will have to learn about Cambodian history, culture, customs, and attitudes before you are really in control of the language. It is not enough to know that \$765/baay/ means 'cooked rice;' you must also learn that \$765/baay/ means 'meal' and in some—but not all—cases, 'food.' Furthermore, to really know Cambodian and to use even a simple word like \$765 effectively, you should know what the social significance of rice is, and the role it plays in the non-meal-time life of the Cambodian people.

The rest of this section will discuss some specific vocabulary problems: the kinship system and the vocabulary used in specific types of social situation.

U.2 Cambodian Kinship

In Cambodian family relations, the most important factor is relative age.

Respect is due members of the family who are older or of a higher generation; indeed, respect is due any older person. This affects the way various family members are addressed and the way they are discussed.

Ordinarily a member of a generation older than the speaker is referred to by the third-person pronoun $\Re \Re '$ /kot/; the honorific particle $\Re \Re \Re '$ /enceen/ is used before verbs when the subject of the sentence refers to such a person, and formal-level vocabulary is used (cf. U.3.1). Note that when one marries into a family, one takes the same position as one's spouse, even though one may be older than some of the spouse's older relatives. For example a man calls all his wife's older siblings $\Re \Re / \text{boon/}$ even if he is older than they.

The kinship terms listed and described below are extremely important. You will need to know them to address many of the Cambodians you meet, especially those who are the same age, younger, or of similar or lower social status. After the kinship terms themselves are introduced, their application to non-relatives will be presented.

In the following tables, the term O-generation means those relatives who are the same generation as the person in question. Plus 1 generation means first ascending generation, or those relatives of the same generation as the person's parents; minus 1 generation means first descending generation, or the person's children's generation.

Plus 2 generation is the grandparents' generation, etc.

		O Generation		3rd-person

U.3 The Effects of International Relations on Language

In relating to Cambodians, you will have to keep in mind that your identity does not remain stable. In English, you refer to yourself as 'I' in all cases, and you address others as 'you.' While in fact you don't relate to everyone in the same way, at least you have that much stability in your identity. However, even the way a Cambodian translates 'I' and 'you' shifts with almost every person he meets.

The term you have learned for 'I' / khñom/ will serve you as a foreigner in most contacts with urban Cambodians. However, a Cambodian learns how to use pronouns like 🏂 /añ/, kinship terms, and titles to refer to himself, depending on his sense of how he relates to his interlocutor.

When you address people you will have a harder time. Here you must come to think like a Cambodian, since there is no word for 'you' like / /khñom/'I' that you can rely on to be appropriate in most situations. You must become aware of the same kinds of distinctions as Cambodians are aware of; the biggest difference will be that Cambodians do it almost automatically; you will have to think about it for a long time

to come.

The problem is complicated by the fact that there are differences in usage between urban and rural speakers, between people from different parts of the country, and between urban people of different social classes. The following discussion cannot be exhaustive, but we will try to give you enough to start with. As you get the chance to associate with Cambodians, listen carefully to how they address and discuss each other and how they refer to themselves.

The first distinction we can make is the way you address and discuss people with whom you are on formal and non-formal terms. Within each of these categories further distinctions are made.

U.3.1 Formal Relations

Formal relationships obtain between you and royalty, clergy and commoners to whom you wish to show respect. Since 1970 and the declaration of the Khmer Republic, there is little need for terms referring to royalty in speech, but they are widely used in pre-1970 writings and in post-1970 writing that refers to the royalty of another country, e.g. the King of Laos or Thailand. They are also used in legends and folk stories and in histories.

Royalty and monks are addressed and discussed using not only 'pronouns' different from each other and from those used with high ranking commoners but also with vocabulary substitutions for many other common verbs and nouns, e.g. 'to eats' royalty *** royalty *** / saoy/, clergy *** / chan/ and commoners to whom you want to show respect *** / pisaa/. (There are other words that distinguish between people with whom you are not on formal terms, e.g. at mealtimes most urban people *** / nam/; children and animals and people whom you hold in contempt *** / sii/).

Pronoun Substitutes

Used to or about royalty

lst person

န်လင်္ကျိုကျ)ခဲ့ဆီဗာ ဗီလင်္ကို ရီဆီမှာ

ການເຂົ້າການ /predacprekun/ + name (used of high
                    ranking monk)
```

Used by clergy

1st person

/atmaa/

2nd person

/noom/ (to parent and to acquaintance of parents' age) otherwise as listed below according to age and social status.

3rd person

) /via/. IN /kee/, NN /kot/ or title as usual.

Used to or about commoners (with whom one is on formal terms)

1st person

/khñom/

2nd person

/look/ (used with males of equivalent or higher social status) TAMPS.

เดาหาหั /look srey/ (used with married females of higher social status and by cosmopolitan Cambodians for most foreign women)

/ne?/ (used for older women of lower status and for one's mother in MRESCO /ne? medaay/'mother.')

marsh /ne? sray/ (used with women of middle class, especially married women)

dea /nian/ (used with unmarried women or with married women of ordinary social status.)

/kañña/ (used with unmarried women; quite formal)

Titles, e.g. 2007858 /look kruu/'(male) teacher' are also used in place of 2nd person pronouns.

3rd person

/kee/ (used of people in general ('they say...'); people 283 for whom respect need not be shown)

/kot/ (used of individuals (singular or plural), especially ಶಾಕ್ those for whom one wishes to show respect)

U.3.2 Non-formal Relationships

Non-formal relationships obtain between you and people with whom you are on friendly or intimate terms or people of lower social status, especially servants and shopkeepers. It is in this kind of relationship that kinship terms are used extensively as second-person forms. (cf. also N.1.2)

1st person

- 1. 55677 /an/ (intimate or vulgar)
- 2.2 /khñom (non-formal)
- 3. Appropriate kinship term in family or in intimate relations outside the family. (see below, under 2nd person)
- 4. sch /yəəŋ/'we,' 'I'
- 5. \$\$\frac{1}{kee}, \frac{1}{kee}, \quad \text{via} \text{ (used by people who know each other well)}

2nd person

- 1. Db /asn/ (intimate or contemptuous)
- 2. Name of person addressed (intimate)
- Appropriate kinship term in family or in non-formal relations outside the family, as follows.

older: 25 /boom/'older sibling' used with older siblings and acquaintances of equivalent or slightly greater age and of the same sex.

335 /cae/(Chinese) for female & /boon/ m (sin) hia/(Chinese) for male & /boon/ 'uncle younger than parent' used with /puu/ ? uncle younger than one's parent or a /mia/ **ESY**) ซิซ male acquaintance of parents* /cək/ generation who is of equivalent or lower social status than speaker. 'aunt younger than parent' used with /miin/ aunt younger than one's parent or a female acquaintance of parents' generation who is of equivalent or

lower social status than speaker.

% /om/

"uncle or aunt older than parent"
used with uncle or aunt older than
parent or with acquaintance of
parents' generation but older than
parents.

fr /cek/ (Chinese) sometimes used for male 🍂 /om/

/ii/ (Chinese) sometimes used for female 🎊 /om/

'grandfather' used with an acquaintance of grandparents' generation who is of equivalent or lower social status than speaker. (One's grandfather is called **CONTEN**) /look taa/.

'grandmother' used with an acquaintance of grandparents' generation who is of equivalent or lower social status than speaken (One's grandmother is called (**CONTEN**) **CONTEN**

/(look) yiey/.

(%) /doun/ /ciidoun/) ene/yiey/

Younger:

'younger sibling' used with a younger sibling or younger

nes /khmuoy/

'nephew or niece' used with a nephew

or niece or with a younger

acquaintance of any age.

acquaintance of any age

mb /mian/

'child, miss' used with unmarried women, married women of ordinary

social standing, and children under

20 or persons at least 10 years

younger.

169 /caw/

'grandchild' used with grandchildren and children under 20 or persons at least 30 or so years younger.

A husband normally calls his wife $\mathcal{F}_{\mathcal{S}}$ / oun/ (from $\mathcal{F}_{\mathcal{S}}$ 'younger sibling'), and this is the first person 'pronoun' that the wife uses in talking to her husband.

Conversely, the wife calls her husband $\mathcal{F}_{\mathcal{S}}$ /boxy/'older brother,' and he calls himself /boxy/ when addressing his wife.

3rd person

- 1. #7 # /k6t/ (used for people whom you know as individuals and for whom you feel respect)
- 2. 28 /kee/ (used for people in general, for people younger than you or lower in status)
- 3. 37 /via/ (used for animals, things, and small children; also seed to indicate contempt)

As noted at U.3, social relationships are expressed not only by pronoun substitutes, but also by choice of the proper verb where several are possible. Fortunately for the foreign learner, the verbs which must be selected according to social criteria are limited; they refer for the most part to such common activities as eating, sleeping, and speaking. A list of the most common is given below. In this list the designations of social level are as follows:

<u>Vulgar</u> means used to or about animals, children, people for whom one need not show much respect or for whom one feels contempt.

Ordinary means used to or about people with whom one is on informal terms but to whom it would be inappropriate to use a vulgar term.

Formal means used to or about people with whom one is on formal terms.

Clerical means used to or about a priest or monk.

Royal means used to or about royalty.

Motion verbs and a few other verbs which are not replaced by another verb at the three highest levels are preceded by an honorific; formal serious formals and royal few /trun/.

For example.

ละเพราะกัญษะกระทั่งยห

he (honorific) come already

He's come already.

If you were speaking of clergy, you would say

เพาหลิยลูยหเทียง

/look nimun móo haey/
he (clergy)(honorific) come already
He's come already.

If you were speaking of royalty, you would say

/pre on trun yian moo hasy/

he (royalty)(honorific) go (royal) come already

He's come already.

(Note the change in the translation of 'he' in these three cases.) Even formal verbs like have pissa/eat' may be preceded by one of the honorific particles, e.g.

รเพารเหลียาสิกาตัว

/look əncəən pisaa gy?/

sir (honorific) eat what

What are you eating?

In the following table of verb alternates there are numbers to indicate who may use certain forms. For example, you may not use risks /pisaa/eat when talking of yourself; instead you must use result to the formal style level. Thus the following interchange is appropriate:

M ငတာအကိုလာရာလာပ္သင်္အေန

/look pisaa baay hasy rii niw/

sir eat rice already or not-yet

Have you eaten yet?

Be တုန ခွိနင္ပကၡာန္ တြဲေတ

/baat khnom tatuol-tien haay/

yes I eat already

Yes, I've eaten already.

The letter (a) means that the form is used in the first person, (b) means that it is used only in the second and third persons, and no letter means that it is used in all three persons.

There are also some nouns which are chosen according to similar considerations, e.g. \$\frac{1}{27} \mathbb{E}' /conhan/'monks' food' (from \$\frac{1}{27} \mathbb{E}'/chan/'to eat (clerical).' Such nouns are much less frequent than the verbs and do not range through all the style levels.

APPENDIX A

Summaries of Some Important Words

X.1 Summary of 272 /baan/a

1. 'to get's

ខ្លុំធង្គជាងលំពារ

/khñom con baan luy/

I want (to get) some money.

2. 'to experience something desirable, to get to's

ងលើនទិញ្ញុំ នេះស្រែងពាង្គិតានេះ សេខស

/via baan rotte kaa cuoy aoy tiw rien/

He was helped to study by the government.

This use of $\mathcal{D} R$ /baan/ is usually translated by an English passive.

3. past tense markers

នេះជាឧប្រជន្មេះទៅង់ពី(នេកស)ក្រីក។

/kee baan prap yeen pii(peel) prik/

They told us this morning.

4. 'can, to be able's

*बुँदशक्वें*बर्गह्र ५

/khnom tiw min baan/

I can't go.

5. before a quantity of completed works

ခိုးဗီကၤလျှ}ေးအရာနှင်္ဂေးကူလ မ

/khnom meel sephiw baan pii kbaal/

I read (and finished) two volumes.

6. 'for ... ' (duration of time) :

मारश्रह दाहर लेंद्र के हिर्देश

/via rien baan pii aatit/

He studied for two weeks.

7. 'not...until's

ผิญเลาเล็นและเกล

/dol maon pii baan khnom tiw/

I won't go until two o'clock.

Note that in this usage \mathfrak{PR} /baan/ is a fixed clause relator (cf. R.3.1) coming between the condition \mathfrak{Rosin} \mathfrak{Sosin} (/dol maon pii/ reach two o'clock') and the contingent event \mathfrak{SSS} /khñom tiw/'I'll go.').

8. 'always' in 27888 /baan tae/s

ကိုတုန္းနာနီယာယမ

/kom baan tae niyiey/
Don't always be talking.

9. 'to get to's

ริญหอู้ยื่នถุดเราเรฯ

/s?ask khnom min baan tiw tee/ I won't get to go tomorrow.

This is really a special case of #2 above.

- X.2 Summary of Sess/aoy/s
 - 1. 'to give's

ဃွဲ့နွဲကလဲကခွဲန

/som aoy luy khñom/

Please give me some money.

- 2. plus adjective, with the meaning 'so that it will be...'s
 - a. following imperatives

ဆုံးမြဲတခိုင္တာရက္မွာက်မ

/som meel any chah/

Please read clearly.

b. causative, following 22 /thee/s

डेड्डिनेट्डलें दारा

/khnom thee acy pibaa?/ I made (it) difficult.

3. causative:

နေနဲ့ အရိုး၍ နှင့်ချင်

/kee aoy khnom rien khmae/ They had me study Cambodian, or They let me study Cambodian.

4. 'for, to's

बुर्धे के का हुन स

/khnom thee acy via/

I did it for him.

Note that formal style replaces 305/209/ by 28 /cuun/, e.g.

รารษีผู้ธรณากรุ

He did it for you (sir).

5. 'I wish you...'s

សុទ្ធិយមានសំណាង។

/som aoy mian somnaan/

I wish you luck.

6. 'provided that' in \$ coss /aoy tae/s

Feninganssmertenery /aoy tae sruol an tim hasy/

Provided it's easy, I'll go.

Note that 65 88 /aoy tae/ is a non-fixed clause relator (cf. R.3.2.2).

with s 3.

इंडमहैं के कार

/khñom tiw nin kốt/ I'll go with him.

and's

พอสัมพิษาชาชาพุธฯ

Sok and Sim went to see a movie.

5. 'still, stable's

หูลอัณรรัธรราช /koun khñom chóo nin hasy/

My child stood quite still.

The word is /nen/'this/that' is often pronounced & /nin/, especially in fast speech in Phnom Penh.

Summary of SENCS /hasy/s X.5

1. 'already'

ระเษิงหลาย เลาะ เก็บ

/kee meel kon muh haey/

They ve already seen that movie.

2. in the future, means 'and it's no longer an issue' (implies a promise):

કુષ્ટ્રમાણું માણું માટે છે. જ

/khñom nin thee encen haey/

I'll do (it) that way.

3. 'and', used between clauses:

နာနားမေ နည်တာခွိနေရန

/kot tiw hasy khnom niw/

He went, and I stayed.

4. 'to be complete's

sig eus d'eussy 4 /thee aoy haey tim/

Get it finished.

5. 'to finish' (resultative verb)

งราเลเนรมสูมิสมสุท

/yeen thee min hasy tee/
We can't finish (it).

X.6 Summary of \$59 /t+w/s

1. 'to go':

/yeen time srok khmae khae kraoy/

We're going to Cambodia next month.

2. motion away from the speakers

News Assault 1500 you now tim/

Please take those things away. (follows the verb phrase)

3. events in future time.

signesser sendings song y /kreoy tim, yeen trew khom ntec/

From now on, we'll have to try harder.

4. imperative:

ष्ट्रकाकार्द्ध ११६५४

/niyiey khmas tiw/

Speak Cambodian: (used at end of clause)

APPENDIX B

Cambodian Names and Titles

B.1 Structure

As in much of the rest of East Asia, the name of an individual in Cambodia has two parts, which are called ANDISTAND /niam trokool/'surname' and ANDISTAND /niam trokool/ or surname comes first.

All ethnic groups in Cambodia follow this system, though the given name may have two parts in the case of Chinese and Vietnamese, e.g. ANDISTAND /an bun hay/'Ang Bun Hai,' in which ANDISTAND /an/'Ang' is the surname and BETO/bun hay/'Bun Hai' are the two parts of the given name.

B.1.1 The Surname

Ethnic Khmer names do not always follow a consistent pattern, perhaps as a result of the fact that surnames were not introduced into Cambodia until 1910. The surname is assigned variously in different families. Probably the most common pattern is to give children the given name of their paternal grandfather as surname, so that in a family in which the paternal grandfather is named *** **Carte*/kasn yim/*KENG Yim** and the father is named **** *** **KET** Loch, a male child might be named **** *** *** /yim khast/*YIM Khet.* Sometimes a female child in such a family is given her maternal grandfather's given name, but usually she receives the paternal grandfather's name also.

Some other families give the children their father's surname, as in Western countries. In such a family the three generations would be named some /kasn ytm/
*KENG Yim, * 2774 576 /kasn loc/*KENG Loch, and 2774 88 /kasn khast/*KENG Khet.*

Yet other families assign both surname and given names as if both were given names, without reference to the names of other members of the family. Thus, for instance, in such a family, the members of the three generations might be named and instance /kasn yim/*KENG Yim,* INSTANCE /kast loc/*KET Loch,* and INSTANCE /kasm khast/
KEM Khet.

Yet other families assign the great-grandfather's name as surname. In addition, a person may change his or her name as an adult, choosing a name that is totally unlike the names of other members of the family.

There is also a case of a man who has as surname both his parents' surnames, e.g. the child of KEM Sos and KHAY Toura might be known as KEM-KHAY Ketera.

B.1.2 The Given Name

Given names are generally chosen for euphony and, if the name has meaning, for the meaning. Siblings of the same sex are often given alliterative names, so that three brothers, for example, might be named \$37\$ /saan/'Sann,' \$5\$ /soon/'San,' \$5\$ /soon/'San,' \$6\$ /soon/'Sos,' or three sisters in the same family might be named \$6\$ /dii/'Di,' \$6\$ /doon/'Dan,' and \$6\$ /dom/'Dom.' Such names need have no meaning at all, being chosen because their sound is pleasing to the parents.

When Khmers give names that have meaning, they normally take names either from the Cambodian language, e.g. 7575 /koulaap/'rose,' or from Sanskrit or Pali, e.g.

// Suramarit/'virtuous and immortal.'

Cambodians who have been influenced by Western culture may give European, especially French, names to their children. They do not ordinarily give Chinese or Vietnamese names unless one parent is Chinese or Vietnamese.

Names of members of the royal family come from Sanskrit and Pali and are normally polysyllabic, e.g. Suramarit, Indravavong, etc. contrasting with names of Khmer origin, which are usually monosyllabic or disyllabic. The present royal family has two main branches, NORODOM and SISOWATH, and each member of the royal family bears one or the other as surname. Members of the royal family are referred to either by both surname and given name, e.g. Prince Norodom Sihanouk, or by given name alone, e.g. Prince Sihanouk.

B.2 Usage

Ordinarily members of a family do not address each other by name but rather use kinship titles (see section U.3.2 above), e.g. & /boxy/'older sibling.'

Kinship terms like 'uncle' or 'younger sibling' are also used to address acquaintances and friends.

When a child enters school, his teachers call him by his full name, e.g. Aussian /kem soh/*KEM Sos, and so his classmates and contemporaries normally follow suit, so that the individual is referred to as Australia soh/*KEM Sos, not Aus /kem/*KEM*

^{1.} There are a few members of the ANG DUONG branch as well.

or Assar /soh/'Sos' by his contemporaries as well. After reaching adulthood, to intimate friends he may be known as ASSA /soh/'Sos,' while to persons with whom he is on formal terms he may be known as INTENTAL /look kem soh/'Look ('Mister') KEM Sos or INTENTAL /look soh/'Look Sos.'

A divorcée will continue to use the name of her divorced husband as above until remarriage, in which case she will adopt the name of the new husband. A widow does likewise.

B.3 Lists of Titles

B.3.1 Titles in General Formal Address

まのカファ	/look/	used with males of equivalent or higher social status.
รณาราธิช /look srey/		used with women of high social status, with wives of
		high status men, and by cosmopolitan Cambodians
		for most foreign women.
<u> </u>	/n6?/	used for older women of ordinary social status and
		for one's mother in NETTON /ne? medaay/'mother.'
Muly,	/ne? srey/	used with married women of the middle class.
era	/niaŋ/	used with married women of the middle class. *Miss* (see above, Section U.3.1), also used with
		children of either sex.
y wy	/kanna/	'Miss' (formal)

B.3.2	Honorific	Titles

1. Drass /ack udom/
2. sorr no proper /look cumtiev/

used to address or refer to the wife of an infinite and a law of the word of t

B.3.3 Royal Titles

1. TATE /sdac/

[M:EUMTISK /preh mohaksat/

[M:EUM /preh caw/

2. FREND /athiriec/

[M:FREND /preh athiriec/

[M:EUMTISK /preh caw athiriec/

3. EUMTISK /mohaksatrey/

EUMTISK UNA /mohaksatriyanii/

4. ASIEE /samdac/

King
King
King
Emperor
Emperor
Queen
Queen

Prince, Princess one who is eligible to become king or queen. Also a non-hereditary title of nobility which the king could give to a commoner or a member of his family, usually his oldest son. May be used to designate an extremely learned or powerful person as well.

5. generality of /preh on moah/

'Prince, Princess' child of the king
'Prince, Princess' grandchild of a king
when both parents are a king's children.
A wife of the king other than his first
wife. She is a commoner.

7. 25,8 /khun/

A commoner who becomes the wife of a

8. saren's /neº mnian/

^{1.} The title Assign /samdac/ has been abolished by decree except for the highest ranks in the Buddhist hierarchy.

			/preh on meah/ or a /ne? on meah/.
	9 . {\$\$ \$	/tran/	Child of a /preh on meah/ or a
			/ne? on meah/ whose mother is a commoner.
	10. 8m3	/kaev/	The child of a /trun/ or child of any
			other descendent of a king whose father
			is a commoner. Children of a /kazv/ are
			considered commoners.
B•3•4	Clerical Title	s (for Buddhist clergy)	
	1. గ్రాణం శాస్త్రేగ్త	/prefix son/)	A Buddhist monk
	1.5లాజనుర్ల్స్ కయాగామర్జ్మ	/look son/	
	2 . 188	/neen/	A postulant monk (2 or 3 months in the wat)
	3 . ഈ 19 1001	/saamenee/	A novice monk (up to approximately two
			years in the wat)
	4. Ag	/phikho?/	A Buddhist monk, particularly one who
	4		is no longer a novice
	5.មហេវេថិវ	/mohathae/	A monk who has been in the wat for at
			least ten years
	6.్రణఃకకాస్క్రి	ທະ)ກິດທ /preh dac/ (preh) kun/	Title for any monk; term of address for
		(pren) kun/	a monk
	7.รศาสษายา	/pren mohaa/)	A monk of high rank, especially the
	នយា	/preh mohaa/ /mohaa/	superior of a wat or his assistants
			This term is used for
	8. รธชรรฐิกา	<pre> f /caw aathikaa/</pre>	The elected superior of a wat
	9 . JANS	/kruu sout/	the elected assistant to the superior of
			a wat (there are two in each wat);
			also called
	เซษหนิการร	/caw aathikaa roon/	assistant superior
	10. มาชารา	'/aacaa/	A lay official who acts as liaison
	•		between the wat and the lay community
	11 . SUKA	/meekun/	The head of the monks of a province

B.3.5 Military Titles

1. Officers

starny on	/udom seeney/	General
१क्रुडिश है जा भेक	/udom seeney aek/	Lieutement General
